Fertilization Mechanisms in Man and Mammals Ralph Gwatkin, 2012-12-06 Fertilization in mammals normally occurs within the oviduct where it is relatively inaccessible to study However as a result of painstaking research most of it carried out over the last five years this barrier to experimentation has been largely overcome by the development of in vitro fertilization techniques for at least 11 different species including man The result has been a rapid increase in our knowledge of the physiological and biochemical mechanisms involved in the fertilization process The aim of this book which is an extension of my recent review of cell

surface interactions in fertilization Gwatkin 1976 is to present a brief but well documented account of the new knowledge that has been attained Although this book deals with mammalian fertilization mechanisms I have included some recent experiments on amphibian and invertebrate gametes to supplement the mammalian picture This information is particularly valuable as the relatively large number of eggs available from these lower forms has advanced our knowledge of certain fertilization mechanisms beyond what is known in mammals However in the interest of brevity I have omitted details of morphology and minor variations between species For these and other aspects not covered here the reader is referred to the books of Austin 1965 1968 vii viii PREFACE Austin and Short 1972 Metz and Monroy 1969 Monroy 1965 Lord Rothschild 1956a and Zamboni 1971a
