Risk Measurement Dominique Guégan, Bertrand K.

Hassani, 2019-03-22 This book combines theory and practice to analyze risk measurement from different points of view. The limitations of a model depend on the framework on which it has been built as well as specific assumptions and risk managers need to be aware of these when assessing risks. The authors investigate the impact of these limitations, propose an alternative way of thinking that challenges traditional assumptions, and also provide novel solutions. Starting with the traditional Value at Risk (VaR) model and its limitations, the book discusses concepts like the expected shortfall, the spectral measure, the use of the spectrum, and the distortion risk measures from both a univariate and a multivariate perspective.

A History of Risk Science Terje Aven, 2025-08-15 Risk has been handled as long as there have been humans on Earth. However, the risk field is a young discipline. Systematic attempts to assess and handle risk explicitly, conceptualizing and expressing risk in society, are a recent endeavour. This book presents a history of risk science and risk analysis, highlighting concepts and principles for understanding, assessing, communicating, managing, and governing risk. The author presents and discusses key contributions to risk science using a historical lens and from the perspective of a risk scientist. The book strengthens our understanding of what risk science is and how it has evolved by exploring fundamental topics such as risk characterization, risk perception, risk communication, risk handling, and decision making, and concludes with reflection on the future of risk science and, in particular, what we can learn from its history. *A History of Risk Science* will be essential reading for risk researchers and graduate students as well as scholars from associated fields applying risk-related analysis to their work.
