which he argued that cognitive science should have its area of application in the design of devices He proposed the foundation of a science of the artificial related with cognitive science in the sense in which we have traditionally understood the relationship between the engineering disciplines and the basic sciences Such a science has been called cognitive ergonomics or cognitive engineering Norman 1986 Simon s cognitive ergonomics 1969 would be independent of cognitive science its basic science although both would be closely related Cognitive science would contribute knowledge on human cognitive processes and cognitive ergonomics would contribute concrete problems of design that should be solved in the context of the creation of devices Norman 1986 the author that coined the term cognitive engineering conceived it as an applied cognitive science where the knowledge of cognitive science is combined with that of engineering to solve design problems According to Norman its objectives would be 1 to understand the fundamental principles of human actions important for the development of the engineering of design principles and 2 to build systems that are pleasant in their use
