*Philosophical Faith and the Future of Humanity* Helmut Wautischer, Alan M. Olson, Gregory J. Walters, 2012-01-02 Karl Jaspers who died in 1969 had a profound impact on 20th century theology and philosophy. His central thesis called for among other things a de-centering of philosophy from its Eurocentric roots and a renewal of its dialogue with other traditions especially Asian ones. This collection of essays includes unpublished work by Jaspers himself as well as testimonies to his life and career by colleagues, associates and translators some of who knew Jaspers personally. Readers will also find commentary and interpretation by researchers who have explored Jaspers work for decades and a biographical account of Jaspers student Leonard Ehrlich who handled much of Jaspers English translation. The book interrogates Jaspers conceptions of philosophical faith, his philosophy of communication and the prospects for world philosophy in the future. Focusing on philosophical faith it assesses Jaspers interpretations of key philosophers such as Kant, Hegel, Schelling, Kierkegaard, Nietzsche and Rosenzweig as well as examining his personal relationships with Bultmann and Heidegger. Contributors also look at Jaspers philosophies of religion and history, his hypothesis of the axial age (Achsenzeit) and his contributions to metaphysics, epistemology and economics. Finally chapters cover Jaspers philosophy of communication and world history. The latter are informed by a burgeoning interest in Kantian Freiheitphilosophie that influenced Jaspers as well as concerns over the future of humanity. These concerns in part account for Jaspers growing popularity in the Middle East, Eastern Europe, Central South America and Asia. Also included are lucid clarifications of the difference between religious and philosophical faith and the relevance of certainty, trust and communication for a future of mankind. Trained as a psychiatrist, Jaspers practiced this profession before becoming a philosopher and thus had a keen insight into the workings of the human mind even as he challenged the philosophical establishment of his time. It is perhaps this depth to his background that adds to the contemporary relevance of his work.

**Nuclear Weapons and the Future of Humanity** Avner Cohen, Steven Lee, Steven P. Lee, 1986      *Energy Resources for Human Settlement in the Solar System and Earth's Future in Space* William A. Ambrose, James F. Reilly II, Douglas C. Peters, 2013-03-14 The book's purpose is to provide the quantitative foundation for beginning to think about developing energy and minerals outside of Earth's atmosphere that are necessary to support scientific missions space and extra terrestrial scientific stations and permanent colonies and ultimately expand Earth's economy beyond the near earth environment to include space resources We cannot envision a situation where all resources required for future space activities are exported from Earth therefore this book clearly illustrates that an effective economy is possible beyond Earth's surface when we consider the resources available in near Earth space Our first audience is members of AAPG American Institute of Mining Metallurgical and Petroleum Engineers AIME and other professionals engaged in energy and resource development As energy professionals we are concerned on a daily basis with providing the necessary energy and minerals required for our growing world population and the increasing standard of living that comes with ample energy availability And more than anything else AAPG members are explorers We are the professionals who have pushed back the boundaries of our resource base from capturing petroleum resources from surface seeps to drilling onshore wells to extract oil and gas and to venturing offshore into increasingly difficult and hostile environments to supply the cheap and abundant energy made available by our advances in technology There are more similarities than differences between deepwater exploration and development and space exploration Beyond our own members however our audience is every rational human being who understands human health and well being quality of life education and freedom are dependent on the energy and minerals that support our advanced civilization Space is the next frontier and as the world civilization expands beyond Earth's surface we hope this publication serves to illustrate there are abundant opportunities to support and maintain and in fact allow to prosper civilization's expansion into space Publisher's website
