Global Challenges Angela Churie-Kallhauge, Gunnar Sjöstedt, Elisabeth Corell, 2017-09-08 The World Summit on Sustainable Development WSSD in Johannesburg 2002 was the latest conference in an international process to manage environment and development issues that can be traced back to the late 1960s Three milestones mark this 30 year process of social and political interaction the United Nations Conference on the Human Environment UNCHE held in Stockholm in 1972 the first international meeting at a high political level convened to address environmental issues the 1992 United Nations Conference on Environment and Development UNCED held in Rio de Janeiro and the WSSD which attempted to set policy goals and targets for the global environmental and developmental challenges previously identified But what did the WSSD achieve Following the summit there have been various opinions of its significance and its outputs many of them negative This book argues that there is a need to place the WSSD in its broader context Understanding the connections between the WSSD and its precedents as well as those between this overall process and individual environmental decision making processes such as on climate change and how they all contribute to the overall global policy process adds a critical dimension to the analysis of the WSSD outcomes This book examines the challenges facing the global policy process for sustainable development as it continues beyond Johannesburg into the future It combines a forward outlook with a historical perspective in tracing the evolution of selected cross cutting themes on the agenda of the three conferences the institutions and formal results of the process and the actors and their patterns of interaction over time The focus is on the decision making dimension the multilateral negotiations which can be seen as the development over time of a pattern of interlinked political activities Global Challenges has four operational objectives first to define the ongoing process that formally began with the Stockholm Conference in 1972 and evolved towards its latest major manifestation at the WSSD second to present

some dynamics of the Stockholm Rio Johannesburg SRJ process by exploring the themes identified third to introduce an approach on how to consider the outcomes of this process as a way of reflecting on what the process has actually accomplished and finally to discuss lessons learned for theory and practice from this exercise The practical lessons include reflections on how the continued SRJ process should best be organised and supported into the future The book takes a uniquely broad outlook and interdisciplinary approach in addressing important lessons relating to the emergence of substantive issues as well as to process and institutional dynamics It is a bridge building exercise from academic analysis to long term strategic thinking in environmental regime building Global Challenges provides a new perspective on the continuing and increasingly complex global environment and development policy process and analyses the interlinkages between the process trends and cross cutting issues that set the conditions for the global efforts to achieve sustainable development It will be essential reading for academics and practitioners interested in seeing the big picture of the global challenges facing people and planet in the 21st century
