*Health Systems Recovery in the Context of COVID-19 and Protracted Conflict* Zsuzsanna Jakab, Sohel Saikat, Duncan Selbie, Saqif Mustafa, Yu Zhang, Geraldine McDarby, Mila Petrova, Redda Seifeldin, 2023-07-10

The COVID 19 pandemic has caused unprecedented disruption worldwide highlighting once again the interdependency of health and socioeconomic development and the global lack of health systems resilience Two years into the pandemic most countries report sustained disruptions across service delivery platforms and health areas with a profound impact on health outcomes The impact of these disruptions is magnified within marginalized communities and in countries experiencing protracted conflict There is an urgent need to focus on recovery through investment in the essential public health functions EPHFs and the foundations of health systems with a focus on primary health care and whole of government and society engagement The aim of this Research Topic is to gather transfer and promote operationalization of key experiences from COVID 19 to inform global and country level recovery that better promote health guide policy direction towards building health systems resilience and thereby ensure economic and social prosperity Experience with COVID 19 has demonstrated that traditional approaches to health system strengthening have failed to achieve the complementary goals of Universal Health Coverage UHC and health security with the divide between the most vulnerable and well off only widening Much of what had been learned from previous experiences such as Ebola in West Africa has not been widely applied This has left health and economic systems vulnerable to 21 st century public health challenges ranging from conflict and natural disasters to aging demographics and rising rates of non communicable and communicable diseases and antimicrobial resistance These challenges require intentional focus and investment as well as whole of government and society engagement with health to build health system resilience Greater action is needed to prevent the devastating effects of war and conflict on the health of the most vulnerable This Research Topic will convene the knowledge and practices of leaders in public health health systems and humanitarian and development sectors This is to ensure lessons from COVID 19 inform the recovery agenda and promote sustainable health and socioeconomic recovery for

all Lest we forget and find ourselves again unprepared and vulnerable in the face of an even greater threat     The New Drug Reimbursement Game Brita A.K. Pekarsky, 2014-10-09 This comprehensive text presents a rigorous framework from within which regulators can respond strategically to the claim by the pharmaceutical industry that lower drug prices today lead to a loss for the population's future health due to less innovation. It starts with a critical review of the empirical evidence of the return to consumers on their ongoing investment into high drug prices in order to increase future innovation. The implicit critical and unrealistic assumption inherent in these studies is identified namely that the health budget can be expanded to purchase drugs at higher prices without an opportunity cost for example the foregone benefits of alternative investments in health care infrastructure. Price effectiveness analysis (PEA) is introduced. PEA informs the question of how the innovative surplus from the new drug should be allocated between the manufacturer and the consumer so as to optimise society's welfare. The method allows the decisions by the regulator and the firm to be analysed jointly by specifying the firm's production and revenue functions in terms of the clinical innovation of a new drug, the incremental effect used in the summary metric of cost effectiveness analysis. An economic value of innovation that takes into account opportunity cost under conditions of economic efficiency in the health system is proposed, the health shadow price. The limitations of the non-strategic methods that currently inform the highly contested new drug subsidy game are presented and the relative strengths of PEA are demonstrated. Health technology assessment quantifies both the clinical innovation of a new drug and its financial impact on the health system. Cost effectiveness analysis tests the relationship between the incremental cost and incremental effect of a new drug for target patients at a given price. PEA tests the relationship between the price of a new drug and the health of the whole population now and into the future. It achieves this by taking into account current inefficiency in both resource allocation and the displacement process and the relationship between price and future innovation.
