The authors invite students to create composition projects, develop aural skills through listening exercises, and analyze musical examples from various styles and genres. With two new authors, this text has been thoroughly revised and expanded yet maintains the intent of its original author, Earl Henry. The optional MySearchLab with eText, powered by Exposition Music, provides opportunities for students to practice their skills and receive immediate feedback. Each chapter has a pretest, posttest, and chapter review. Separate drills are included for ear training. These assessments feature more than the usual multiple-choice questions, allowing a student to drag and drop notation on a musical staff. This provides opportunities to demonstrate the mastery of concepts and reach a variety of learning styles. A better teaching and learning experience. Improve Critical Thinking. Each of the 13 chapters divides into five main areas, allowing students to learn terms and symbols and expand their listening skills. Exercises encourage students to apply concepts to a piece of music at the conclusion of each chapter. Engage Students. Each chapter concludes with a number of creative exercises and projects, allowing students to learn interactively. With the audio CD and MySearchLab, powered by Exposition Music, students can polish their aural skills using the drills designed specifically to accompany the text. Support Instructors. **Fundamentals of Music Processing** Meinard Müller, 2021-04-09. The textbook provides both profound technological knowledge and a comprehensive treatment of essential topics in music processing and music information retrieval (MIR). Including numerous examples, figures, and exercises, this book is suited for students, lecturers, and researchers working in audio engineering, signal processing, computer science, digital humanities, and musicology. The book consists of eight chapters. The first two cover foundations of music representations and the Fourier transform concepts used throughout the book. Each of the subsequent chapters starts with a general description of a concrete music processing task and then discusses in a mathematically rigorous way essential techniques and algorithms applicable to a wide range of analysis, classification, and retrieval problems. By mixing theory and practice, the book's goal is to offer detailed technological insights and a deep understanding of music processing applications. As a substantial extension, the textbook's second edition introduces the FMP Fundamentals of Music Processing Notebooks, which provide additional audio, visual material, and Python code examples that implement all computational approaches step by step. Using Jupyter Notebooks
