The Neurobiologic Mechanisms in Manipulative Therapy I.M. Korr,2012-12-06 At the request of a Subcommittee of the United States Senate in February 1975 the National Institute of Neurological Disorders and Stroke now the National Institute of Neurological and Communicative Disorders and Stroke conducted a Workshop on the Research Status of Spinal Manipulative Therapy The Workshop was held in response to the Senate Subcommittee's request for an independent unbiased study of the fundamentals of the chiropractic profession Since spinal manipulative therapy is a key tenet of chiropractic the Institute felt a research workshop focused on that issue would provide a useful base upon which to examine the broad concept of the role of biomechanical alterations of the spine in health and disease This would include the pathophysiologic and clinical hypotheses formulated by medical and osteopathic physicians as well as chiropractors Why the relatively sudden interest of the Senate Subcommittee in chiropractic There were probably many reasons for that interest but suffice to say anticipation of discussion on the role of chiropractic in any national system of health insurance could in itself have provided adequate stimulus for the request In any case the NINCDS was asked to review what was and what was not known about the fundamentals of chiropractic I stress fundamentals since as a research organization the NINCDS is not charged with reviewing matters such as clinical education licensure or clinical practice A small expert committee of scientific consultants helped the Institute design the format and agenda for the Workshop
