Behavioral Economics of Preferences, Choices, and Happiness Shinsuke Ikeda, Hideaki Kiyoshi Kato, Fumio Ohtake, Yoshiro Tsutsui, 2016-01-13 This book is a collection of important contributions by Japanese researchers and their coauthors to present current advances in behavioral economics and finance particularly in relation to decision making and human well being The topics covered in this volume include decision making under the conditions of inter temporal choices risk and social relations happiness and the neuro scientific biological basis of behavior The book includes works of research both theoretical and empirical on time discounting time preferences risk aversion altruism social status happiness addiction limited attention and health and financial investments The authors of the chapters add supplementary discussions to survey more recent advances on related topics or to provide detailed information that were abbreviated in the original publications The addenda will enable readers to deepen their understanding of decision making and human well being

Algebra of Conscience V.A. Lefebvre, 2013-04-17 Conscience is an essential human attribute Nevertheless in the construction of formal models of the subject it is customarily left outside the framework of theoretical analysis The Algebra of Conscience whose first edition appeared in 1982 was the first specialized work modeling the phenomenon of conscience The method used in this book made it possible to connect moral experience with decision making procedures on the level of mathematical models The application of such models allows us to propose the hypothesis of two fundamentally different ethical systems determining the normative patterns of human behavior in situations of conflict Under the first ethical system the subject s self esteem is raised if the subject seeks to resolve the conflict in the second it is raised by seeking to dramatize the conflict The new edition of The Algebra of Conscience is significantly expanded The second part of the book devoted to moral choice is completely new Based on the theory presented in the first part it constructs the model of a subject capable of making an intentional choice A special variable corresponds to the subject s intention This development allows us to include within the model freedom of will and freedom of choice and also to generalize classical 2 2 game theory to the case where outcomes in addition to having utility measures are either positive or negative In its concluding chapters the book constructs a dynamic model of the intentional subject faced with a choice between two alternatives neither of which is morally acceptable for the subject It is shown that in this case the probabilities of choice of the alternatives may change chaotically From this it follows that one cannot predict which alternative will be chosen or even the probabilities with which they will be chosen Audience The book is addressed to a broad readership having elementary knowledge of mathematical logic and the theory of probability It can be used in college courses studying the modelling of moral choice The book s material can also be used in the design of artificial intelligence systems

The Economics of Self-Destructive Choices Shinsuke

Ikeda, 2016-02-19 Based on recent advances in economics especially those in behavioral economics this book elucidates theoretically and empirically the mechanism of time inconsistent decision making that leads to various forms of self destructive behavior The topics include over eating and obesity over spending over borrowing under saving procrastination smoking gambling over drinking and other intemperate behaviors all of which relate to serious social problems in advanced countries In this book the author attempts to construct a bridge between the basic theory of time discounting especially as of hyperbolic discounting and empirically observed irrational non classical behavior in the various contexts just mentioned The empirical validity of the theory is discussed using unique micro data as well as public macro data The book proposes prescriptions for individual decision makers whether sophisticated or naive to make better choices in self control problems and also provides policy makers with useful advice for influencing people's decision making in the right directions This work is recommended not only to general readers who seek to learn how to attain better self regulation under self control problems It also helps researchers who seek an overview of positive and normative implications of hyperbolic discounting and thereby reconstruct economic theory for a better understanding of actual human behavior and the resulting economic dynamics

Money-Pump Arguments Johan E. Gustafsson, 2022-10-13 Suppose that you prefer A to B B to C and C to A Your preferences violate Expected Utility Theory by being cyclic Money pump arguments offer a way to show that such violations are irrational Suppose that you start with A Then you should be willing to trade A for C and then C for B But then once you have B you are offered a trade back to A for a small cost Since you prefer A to B you pay the small sum to trade from B to A But now you have been turned into a money pump You are back to the alternative you started with but with less money This Element shows how each of the axioms of Expected Utility Theory can be defended by money pump arguments of this kind This title is also available as Open Access on Cambridge Core

Risk, Decision and Rationality Bertrand

Munier, 2012-12-06 Decision Theory has considerably developed in the late 1970 s and the 1980 s The evolution has been so fast and far reaching that it has become increasingly difficult to keep track of the new state of the art After a decade of new contributions there was a need for an overview of the field This book is intended to fill the gap The reader will find here thirty nine selected papers which were given at FUR III the third international conference on the Foundations and applications of Utility Risk and decision theories held in Aix en Provence in June 1986 An introductory chapter will provide an overview of the main questions raised on the subject since the 17th Century and more particularly so in the last thirty years as well as some elementary information on the experimental and theoretical results obtained It is thus hoped that any reader with some basic background in either Economics Management or Operations Research will be able to read profitably the thirty nine other chapters Psychologists Sociologists Social Philosophers and other specialists of the social sciences will also read this book with interest as will high level practitioners of decision making and advanced students in one of the abovementioned fields An expository survey of this volume will be found at the end of the introductory chapter so that any of

the seven parts of the book can be put by the reader in due perspective *The Irrational Economist* Erwann Michel-Kerjan, Paul Slovic, 2010-01-05 Of the twenty most costly catastrophes since 1970 more than half have occurred since 2001 Is this an omen of what the 21st century will be How might we behave in this new uncertain and more dangerous environment Will our actions be rational or irrational A select group of scholars innovators and Nobel Laureates was asked to address challenges to rational decision making both in our day to day life and in the face of catastrophic threats such as climate changes natural disasters technological hazards and human malevolence At the crossroads of decision sciences behavioral and neuro economics psychology management insurance and finance their contributions aim to introduce readers to the latest thinking and discoveries The Irrational Economist challenges the conventional wisdom about how to make the right decisions in the new era we have entered It reveals a profound revolution in thinking as understood by some of the greatest minds in our day and underscores the growing role and impact of economists and other social scientists as they guide our most important personal and societal decisions **Freedom and Self-creation** Katherin A. Rogers, 2015 Katherin A. Rogers presents a new theory of free will based on the thought of Anselm of Canterbury We did not originally produce ourselves Yet according to Anselm we can engage in self creation freely and responsibly forming our characters by choosing from ourselves a self between open options Anselm introduces a new agent causal libertarianism which is parsimonious in that unlike other agent causal theories it does not appeal to any unique and mysterious powers to explain how the free agent chooses After setting out Anselm's original theory Rogers defends and develops it by addressing a series of standard problems levelled against libertarianism These include the problem of internalism in that an agent is not the source of his original motivations how can the structure of his choice ground his responsibility the problem of Frankfurt style counterexamples Do we really need open options to choose freely and the problem of luck If nothing about an agent before he chooses explains his choice then isn't the choice just dumb luck The Anselmian answer to this perennial criticism is especially innovative proposing that the relationship between choices and character exactly backwards Finally as a theory about self creation Anselmian Libertarianism must defend the tracing thesis the claim that an agent can be responsible for character determined choices if he himself formed his character through earlier choices Throughout the book defends and exemplifies a new methodological suggestion someone debating free will ought to make his background world view explicit In the on going debate over the possibility of human freedom and responsibility Anselmian Libertarianism constitutes a new and plausible approach *An Essay on the Philosophy of Christianity.
