Energy-Efficient Distributed Computing Systems Albert Y. Zomaya, Young Choon Lee, 2012-07-26. The energy consumption issue in distributed computing systems raises various monetary, environmental, and system performance concerns. Electricity consumption in the US doubled from 2000 to 2005. From a financial and environmental standpoint, reducing the consumption of electricity is important, yet these reforms must not lead to performance degradation of the computing systems. These contradicting constraints create a suite of complex problems that need to be resolved in order to lead to greener distributed computing systems. This book brings together a group of outstanding researchers that investigate the different facets of green and energy-efficient distributed computing. Key features: One of the first books of its kind. Features latest research findings on emerging topics by well-known scientists. Valuable research for grad students, postdocs, and researchers. Research will greatly feed into other technologies and application domains.

Proceedings of the Fourteenth Annual ACM-SIAM Symposium on Discrete Algorithms, 2003-01-01. From the January 2003 symposium come just over 100 papers addressing a range of topics related to discrete algorithms. Examples of topics covered include packing Steiner trees, counting inversions in lists, directed scale-free graphs, quantum property testing, and improved results for directed multicut. The papers were not formally refereed, but attempts were made to verify major results. Annotation c 2003 Book News, Inc. Portland, OR: booknews.com.

Distributed Computing in Sensor Systems Sotiris Nikolettas, Bogdan Chlebus, David B. Johnson, Bhaskar Krishnamachari, 2008-06-07.
