## **Future Of Science In Elementary Schools Educating Prospective Teachers:**

The Future of Science in Elementary Schools Senta A. Raizen, Arie M. Michelsohn, 1994-02-09 Scientific literacy depends upon children's early engagement in science. It is in the elementary school years that teachers have an opportunity to cultivate and nourish their students' innate curiosity about the world. Well-taught science classes help give students the skills to investigate problems logically and systematically and make informed decisions based on evidence skills that can serve young people the rest of their lives. Unfortunately, many teachers are ill-prepared to teach these classes. Drawing on the knowledge and experience of a panel of leaders in elementary education and in science education and the results of a survey of 142 teacher education programs, editors Senta A. Raizen and Arie M. Michelsohn offer a new vision for preparing prospective teachers of grades K through six in science content and pedagogy: a vision that will transform teachers from people who merely pass on someone else's knowledge to creative facilitators of children's learning through involvement in the process of science investigation. The authors include a three-part interchangeable model for preparing teachers in science and they outline the basics of what prospective elementary school teachers need to learn in science courses and in science pedagogy courses, including fundamental underlying concepts, habits of mind, and effective instructional strategies. The recommended courses and programs will arm teachers with powerful tools necessary for a true understanding of science learning in children.

*Educating Teachers of Science, Mathematics, and Technology* National Research Council, Center for Education, Committee on Science and Mathematics Teacher Preparation, 2001-01-18 Each new headline about American students' poor performance in math and science leads to new calls for reform in teaching. *Educating Teachers of Science, Mathematics, and Technology* puts the whole picture together by synthesizing what we know about the quality of math and science teaching, drawing conclusions about why teacher preparation needs reform, and then outlining recommendations for accomplishing the most important goals before us. As a framework for addressing the task, the

book advocates partnerships among school districts colleges and universities with contributions from scientists mathematicians teacher educators and teachers It then looks carefully at the status of the education reform movement and explores the motives for raising the bar for how well teachers teach and how well students learn Also examined are important issues in teacher professionalism what teachers should be taught about their subjects the utility of in service education the challenge of program funding and the merits of credentialing Professional Development Schools are reviewed and vignettes presented that describe exemplary teacher development practices

Science Teachers' Learning National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Teacher Advisory Council, Board on Science Education, Committee on Strengthening Science Education through a Teacher Learning Continuum, 2016-01-15 Currently many states are adopting the Next Generation Science Standards NGSS or are revising their own state standards in ways that reflect the NGSS For students and schools the implementation of any science standards rests with teachers For those teachers an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science their familiarity with a range of instructional strategies and the skills to implement those strategies in the classroom Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers learning across their careers from their initial training to continuing professional development A teacher s capability to improve students scientific understanding is heavily influenced by the school and district in which they work the community in which the school is located and the larger professional communities to which they belong Science Teachers Learning provides guidance for schools and districts on how best to support teachers learning and how to implement successful programs for professional development This report makes actionable recommendations for science teachers learning that take a broad view of what is known about science education how and when teachers learn and education policies that directly and indirectly shape what teachers are able to learn and teach The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers Science Teachers Learning will be a valuable resource for classrooms departments schools districts and professional organizations as they move to new ways to teach science      **Proceedings of IAC-TLEI 2016 in Budapest** group of authors, 2016-07-01 International Academic Conference on Teaching Learning and E learning in Budapest Hungary 2016 IAC TLEI 2016 Friday Saturday July 8 9 2016
