Ecology Of Trees In The Tropical Rain Forest:

The Ecology of Trees in the Tropical Rain Forest I. M. Turner, 2001-07-05 With detailed information available for perhaps only a few hundred of the many thousand of species that occur our current knowledge of the ecology of tropical rainforest trees is limited This book aims to summarize the contemporary understanding of the ecology of tropical rainforest trees The emphasis is on comparative ecology an approach that can help to identify possible adaptive trends and evolutionary constraints and that may also lead to a workable ecological classification for tree species conceptually simplifying the rainforest community and making it more amenable to analysis

Tropical Rain Forests of the Far East Timothy Charles Whitmore, Christopher Paul Burnham, 1975 Seasonality Growth of the forest Kinds of forest Man and the tropical rain forest

The Tropical Rain Forest Paul Westmacott Richards, 1996-08-08 The first edition of The Tropical Rain Forest is firmly established as one of the classics of botanical literature In this new and completely revised edition Professor Richards provides a personal view of the field based on over sixty years involvement in rain forest ecology Climatic changes and human pressures have a major impact on the rain forests and it is now possible to see the possibility of their complete destruction This book represents an important record of the rain forest in the twentieth century

Tropical Rain Forest Ecology, Diversity, and Conservation Jaboury Ghazoul, Douglas Sheil, 2024-03-14 Rain forests represent the world s richest repository of terrestrial biodiversity and play a major role in regulating the global climate They support the livelihoods of a substantial proportion of the world s population and are the source of many internationally traded commodities They remain despite decades of conservation attention increasingly vulnerable to degradation and clearance with profound though often uncertain future costs to global society Understanding the ecology of these diverse biomes and peoples dependencies on them is fundamental to their future management and conservation Tropical Rain Forest Ecology Diversity and Conservation introduces and explores what rain forests are how they arose what they contain how they function and how humans use and impact them The book starts by introducing the variety of rain forest plants fungi microorganisms and animals emphasising the spectacular diversity that is the motivation for their conservation The central chapters describe the origins of rain forest communities the variety of rain forest formations and their ecology and dynamics The challenge of explaining the species richness of rain forest communities lies at the heart of ecological theory and forms a common theme throughout The book s final section considers historical and current interactions of humans and rain forests It explores biodiversity conservation as well as livelihood security for the many communities that are dependent on rain forests inextricable issues that represent urgent priorities for scientists conservationists and policy makers

Tropical Rain Forest Ecology D. J. Mabberley, 1983 Since the first edition of this book was written public awareness of tropical rain forests has become so great that issues involving their exploitation are the stuff of daily newspapers radio and television The plight offorest living peoples has become an international issue concerns over the greenhouse effect and other climatic changes are often linked to rain forest

destruction At the same time there has been an unparalleled scientific interest in the workings of the rain forest and an increasing concern by economists as to its potential in balancing the books of many developing countries The need for an advanced yet concise and up to date synthesis of recent studies and a key to the increasingly voluminous literature on rain forests is even greater than it was in 1983 There are now many highly illustrated popular books on rain forests as well as new editions of K A Longman and J Jenik *Tropical rain forest and its environment* 2nd edition 1987 and T e Whitmore *Tropical rainforests of the Far East* 2nd edition 1984 many of the splendid illustrations from *Introduction to tropical* which are to be found in his rather less ambitious *rain forests* 1990 Other very welcome regional accounts of rain forest biology in various parts of the tropics have appeared notable being D H Janzen ed *Costa Rican natural history* 1983 Earl of Cranbrook ed *Malaysia* 1988 G T Prance and T E Lovejoy eds *Amazonia* 1984 A The Tropical Rain Forest P. W. Richards, 1952

Tropical Rainforests Eldredge Bermingham, Christopher W. An Introduction to Tropical Rain Forests T. C. Whitmore, 1998-03-26 This new edition of Whitmore's classic introduction to tropical rain forests has been comprehensively revised and updated reflecting the changes which have taken place since it was first published in 1990 The sections on human impact have been extended including a new global assessment of deforestation and details of new research on biodiversity and conservation The book remains unique in linking rain forest biology and ecology with silviculture and with concerns over sustainable resource utilization and the future of the tropical rain forests Accessibly written and illustrated throughout it is a must for biology and geography students and anyone who seeks to know more about the nature and importance of the world's tropical rain forests **Tropical Forests of the**

Guiana Shield D. S. Hammond, 2005 The Guiana Shield is an ancient geological formation located in the northern part of South America covering an area of one million square kilometres Despite its hostile environment it is home to many unusual and highly specialized plants and animals which constitute a rich area of biodiversity Chapters in this book include hydrology nutrient cycling forest phenology insect plant interactions forest microclimate plant distributions forest dynamics and conservation and management of flora and fauna It provides a comprehensive and detailed review of the ecology biology and natural history of the forests of the area *The World Atlas of Trees and Forests* Herman Shugart, Peter White, Sassan Saatchi, Jérôme Chave, 2022-09-20 A marvelously illustrated look at the world's diverse forests and their ecosystems The

earth's forests are havens of nature supporting a diversity of life Shaped by climate and geography these vast and dynamic wooded spaces offer unique ecosystems that shelter complex and interdependent webs of flora fungi and animals The World Atlas of Trees and Forests offers a beautiful introduction to what forests are how they work how they grow and how we map assess and conserve them Provides the most wide ranging coverage of the world's forests available Takes readers beneath

the breathtaking variety of wooded canopies that span the globe Profiles a wealth of tree species with enlightening and entertaining natural history highlights along the way Features stunning color photos maps and graphics Draws on the latest cutting edge research and technology including satellite imagery

Biotic Interactions in the Tropics David Burslem,Michelle Pinard,Sue Hartley,2005-09-08 Tropical ecosystems house a significant proportion of global biodiversity To understand how these ecosystems function we need to appreciate not only what plants animals and microbes they contain but also how they interact with each other This volume first published in 2005 synthesises the state of knowledge in this area with chapters providing reviews or case studies drawn from research conducted in both Old and New World tropics and including biotic interactions among taxa at all trophic levels In most chapters plants typically trees are the starting point but taken together the chapters consider interactions of plants with other plants with micro organisms and with animals and the inter relationships of human induced disturbance with interactions among species An underlying theme of the volume is the attempt to understand the maintenance of high diversity in tropical regions which remains one of the most significant unexplained observations in ecological studies

Stability of Tropical Rainforest Margins Teja Tscharntke,Christoph Leuschner,Manfred Zeller,Edi Guhardja,Arifuddin Bidin,2007-04-26 Tropical rainforests are disappearing at an alarming rate causing unprecedented losses in biodiversity and ecosystem services This book contributes to an improved understanding of the processes that have destabilizing effects on ecological and socio economic systems of tropical rain forest margins as well as striving to integrate environmental technological and socio economic issues in their solution

Changes And Disturbance In Tropical Rain Forest In South East Asia Tim H Clutton-brock,David M Newbery,G T Prance,2000-09-27 Views on the dynamics of tropical forests are changing rapidly with the recognition that their environment is variable on the decadal to century scale Fluctuating climatic conditions partly determine tropical forest structure species composition and dynamics Tropical communities are also highly contingent in space and time with respect to site and historical factors Tropical forests have experienced to some degree this disturbance regime in the past but climatologists are now predicting increasingly frequent extreme events in the new century The combination of increasing deforestation and land use conversion by man plus an increasingly variable environment means a situation that could be very difficult to manage

Conservation and Management of Tropical Rainforests, 2nd Edition Eberhard F Bruenig,2016-12-07 This new edition of Conservation and Management of Tropical Rainforests applies the large body of knowledge experience and tradition available to those who study tropical rainforests Revised and updated in light of developments in science technology

economics politics etc and their effects on tropical forests it describes the principles of integrated conservation and management that lead to sustainability identifying the unifying phenomena that regulate the processes within the rainforest and that are fundamental to the ecosystem viability Features of the natural forest and the socio cultural ecosystems which can be mimicked in the design of self sustaining forests are also discussed A holistic approach to the management and conservation of rainforests is developed throughout the book The focus on South East Asian forestry will be widened to include Africa and Latin America Recent controversial issues such as biofuels and carbon credits with respect to tropical forests and their inhabitants will be discussed This book is a substantial contribution to the literature it is a valuable resource for all those concerned with rainforests

Plant Biodiversity Abid A Ansari, Sarvajeet Singh Gill, Zahid Khorshid Abbas, M Naeem, 2016-12-23 Results of regular monitoring of the species diversity and structure of plant communities is used by conservation biologists to help understand impacts of perturbations caused by humans and other environmental factors on ecosystems worldwide Changes in plant communities can for example be a reflection of increased levels of pollution a response to long term climate change or the result of shifts in land use practices by the human population This book presents a series of essays on the application of plant biodiversity monitoring and assessment to help prevent species extinction ecosystem collapse and solve problems in biodiversity conservation It has been written by a large international team of researchers and uses case studies and examples from all over the world and from a broad range of terrestrial and aquatic ecosystems The book is aimed at any graduate students and researchers with a strong interest in plant biodiversity monitoring and assessment plant community ecology biodiversity conservation and the environmental impacts of human activities on ecosystems

Tropical Rainforest Responses to Climatic Change Mark B. Bush, John Flenley, 2007 The goal of this book is to provide a current overview of the impacts of climate change on tropical forests to investigate past present and future climatic influences on the ecosystems with the highest biodiversity on the planet Tropical Rainforest Responses to Climatic Change will be the first book to examine how tropical rain forest ecology is altered by climate change rather than simply seeing how plant communities were altered Shifting the emphasis onto ecological processes e g how diversity is structured by climate and the subsequent impact on tropical forest ecology provides the reader with a more comprehensive coverage A major theme of this book that emerges progressively is the interaction between humans climate and forest ecology While numerous books have appeared dealing with forest fragmentation and conservation none have explicitly explored the long term occupation of tropical systems the influence of fire and the future climatic effects of deforestation coupled with anthropogenic emissions Incorporating modelling of past and future systems paves the way for a discussion of conservation from a climatic perspective rather than the usual plea to stop logging
