**Software Architecture: System Design, Development and Maintenance** Jan Bosch, Morven Gentleman, Christine Hofmeister, Juha Kuusela, 2013-06-29 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software

development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is treated explicitly during development product derivation in software product lines at run time and during system evolution Software architecture as an artifact has been decoupled from a particular lifecycle phase

**The Purpose of Business. Where Value meets Strategic Sustainable Development** Sophia von Petersdorff, 2018-08-13 Master's Thesis from the year 2018 in the subject Business economics General grade 1.6 Blekinge Institute of Technology Strategic Sustainability language English abstract The current global economic paradigm centred on growth is a significant barrier in the transition towards a sustainable society Business as Usual companies operating within this paradigm are perceived to prosper at the expense of society and environment which is not viable on a finite planet The need to rethink the purpose of business is inevitable as maximising shareholder value has been deemed insufficient to create a sustainable society This study aimed to explore how business models can be used to create value that supports Strategic Sustainable Development Previous research proposed that the concept of Business Models for Sustainability helps business place sustainability at the core of all consideration A qualitative research was chosen for which we employed the Framework for Strategic Sustainable Development and combined a literature review with an investigation of three expert groups to answer our research question Our findings showed that compared to other value forms system value is the most appropriate concept for businesses striving towards sustainable development Based on our findings six themes emerged that businesses need to address to accelerate the speed of change towards sustainability To make a relevant contribution to the intended audience a prototype has been developed based on our findings
