The Energy System

Travis Bradford,2018-09-11 A comprehensive textbook that integrates tools from technology economics markets and policy to approach energy issues using a dynamic systems and capital centric perspective The global energy system is the vital foundation of modern human industrial society Traditionally studied through separate disciplines of engineering economics environment or public policy this system can be fully understood only by using an approach that integrates these tools This textbook is the first to take a dynamic systems perspective on understanding energy systems tracking energy from primary resource to final energy services through a long and capital intensive supply chain bounded by both macroeconomic and natural resource systems The book begins with a framework for understanding how energy is transformed as it moves through the system with the aid of various types of capital its movement influenced by a combination of the technical market and policy conditions at the time It then examines the three primary energy subsystems of electricity transportation and thermal energy explaining such relevant topics as systems thinking cost estimation capital formation market design and policy tools Finally the book reintegrates these subsystems and looks at their relation to the economic system and the ecosystem that they inhabit Practitioners and theorists from any field will benefit from a deeper understanding of both existing dynamic energy system processes and potential tools for intervention

Project Management Under Internet Era Shaopei Lin,Dan Huang,2020-02-27 Taking account of modern digital era the emergence of Internet has brought a new scenario of ecology in project management PM its methodology platform procedures and tools are subjected to subversive changes So a monograph of Project Management Under Internet Era is urgently needed for renewing concepts in our PM community The concept of how PM is implemented on the virtual platform through Internet which is widely used in PM community based on knowledge economy meanwhile it is different from former industrial economy with solid assets as its resources and run the project on a real physical manner Beside the traditional PM this book presents how shall we accommodate to conventional PM and also accommodate to Internet environment it also discusses program management and

portfolio management under Internet as well as the challenges of PM in the future From strategic point of view talent cultivation is extremely critical to PM development we need to cultivate our talents accommodating to the digital era and on the Internet platform This is the impetus and the reason of why this monograph is initiated which can be used as the textbook for graduate and undergraduate students in related majors also a reference book to the practitioners who are working on PM under Internet digital era

Sustainable Macroeconomics, Climate Risks and Energy Transitions Unurjargal Nyambuu, Willi Semmler, 2023-05-30 Given the industrialized world's historical dependence on fossil fuel based energy resources and the now realized perils of moving beyond the earth's carbon budget this book explores the myriad challenges of climate change and in reaching a low carbon economy Reconciling the medium term competing yet frequently complementary needs for transition policies the book provides guidelines for complex and often conflicting climate policy tasks The book presents empirical trends in the use of carbon emitting resources and evaluates market driven short termism and its adverse impact on resource use and the environment it emphasizes a medium term macroeconomic perspective for the transition The authors attempt a paradigm shift towards a framework of sustainable macroeconomics They survey relevant historical models conduct empirical and numerical analyses of the climate change relevant dynamic models provide empirical illustrations and evaluate diverse policy options and implementations together with their historical evolution New analytical issues are also considered e.g. strategic behavior in the energy and resource sectors energy competition and the dynamics of market shares in new energy technology and supporting policies for dealing with the tipping points encountered in climate change The authors suggest a multitude of market based strategies and public fiscal monetary and financial policies and longer run planning for resource extraction all suitable for driving sustainable growth and a transformation of the energy sector The book also examines the multiple delaying forces slowing the transition to a low carbon economy these typically arise from short termism lock ins irreversibility leakages non cooperative games and other political strategies Thus they explain the snail's pace evolution of current national and global climate policies The book will appeal to scholars and students of economics and environmental science It is also relevant for policymakers and practitioners in multilateral institutions research institutions as well as governments and ministries of countries interested in alternative energy sources climate economists and those who study the implementation of sustainable and low carbon based policies
