## **Economics Of Oligopolistic Competition:**

*The Economics of Competition, Collusion and In-between* Claude d'Aspremont, Rodolphe Dos Santos Ferreira, 2021-05-18  
This book provides a methodology for the analysis of oligopolistic markets from an equilibrium viewpoint considering competition within and between groups of firms. It proposes a well founded measure of competitive toughness that can be used in empirically relevant applications. This measure reflects the weight put by each firm on competition for market share relative to competition for market size. Two dimensions of competition involving conflicting and convergent interests respectively. It further explores several applications such as the effect of tougher competition on innovation and of output market power on the emergence of involuntary unemployment as well as the importance of strategic interactions for investment decisions. Relative to the dominant model of monopolistic competition, *The Economics of Competition, Collusion and In-between* aims to explore an alternative tractable model of firm competition opening the application of oligopoly theory to many fields in economics where general equilibrium features are crucial. It will be relevant to those interested in applied industrial organization, trade, macroeconomics, in particular macrodynamics and quantitative economics.

**Economics of Oligopoly** Sigrid Stroux, 2002      *Competition Among the Few* William Fellner, 1960      **The Economics of Oligopolistic Competition** Robert E. Kuenne, 1992. Professor Kuenne is a leading authority in the field of economic theory having made significant contributions to the fields of general equilibrium theory, industrial organization and regional science. This volume focuses on the development and exposition of a new theory of oligopoly which is asserted to have certain advantages over game theoretic approaches. It is designed to be operational to be capable of fitting within general equilibrium frameworks to permit multiobjective optimization by firms and to be soluble by nonlinear programming techniques. Most importantly, Professor Kuenne develops themes concerning the need to incorporate within oligopoly a blending of the cooperative and competitive that typifies the price strategies of oligopolists within most industries with small numbers of competitors. Unlike game theory, this approach permits analysis of the peculiar socioeconomic power structure that develops within oligopolies and constrains members' decision making freedom. This power structure can be derived exogenously or endogenously in the modelling. The theory is developed fully with extensive empirical application, particularly to decision making within the OPEC petroleum cartel in the 1970s.

The book addresses the role of competition and regulatory policies on a number of key issues in telecommunications such as market definition, collective dominance, access to networks and allocation of scarce resources.
