and Practice Rosalie Ruegg, Harold Marshall, 2013-11-11 We no longer build buildings like we used to nor do we pay for them in the same way Buildings today are no longer only shelter but are also life support systems communication terminals data manufacturing centers and much more Buildings are incredibly expensive tools that must be constantly adjusted to function efficiently The economics of building has become as complex as its design When buildings were shelter they lasted longer than their builders The average gothic master mason lived 35 or 40 years Cathedrals took 3 or 4 hundred years to build Cost estimates were verified by great great grandchildren of the original designer Today creative economics has become as important as creative design and creative building The client brings builder contractor architect and facilities manager to account in their life time The cost of building can therefore no longer be left to chance or act of god Solutions are no longer as ingeniously simple as those proposed by a Florentine builder early in the 15th century He proposed to center the dome of S Maria del Fiore on a great mound of earth mixed with pennies When the job was done street urchins would carry away the dirt in their search for the pennies This was a serious suggestion offered by an early construction manager before Brunelleschi solved the problem more sensibly

Environmental And Resource Economics: Theory And Practice Scott Kaplan, David Roland-holst, David Zilberman, 2023-10-04 Modern society is currently facing a cascade of environmental crises Moving forward it will be the job of current and future generations to develop sound and creative approaches to addressing them This book attempts to provide insight into the ways in which society can confront modern agricultural environmental and resource challenges In particular it provides an economic lens with which to examine and confront these issues The first part of the book introduces a general economic framework that can be used to analyze these issues Subsequent chapters rely on this framework to introduce and explain specific concepts in agricultural environmental and resource economics including but not limited to non renewable and renewable resource management pesticide use and climate change The book develops quantitative tools that the readership can use to analyze and better understand the complexities of these challenges Each chapter includes specific applications and an accompanying Appendix includes a longer list of practice problems that can be brought into courses as exercises Resources are available to instructors who adopt this book More details at www.worldscientific.com/worldscibooks/10.1142/13304 sm
