Economists offer rigorous quantitative analyses of how the institutional design and purpose of the WTO and its progenitor
the GATT affect economic development The World Trade Organization WTO was established partly to support economic
development in developing countries through international trade This goal has been elusive with some questioning the WTO's
ability to achieve such a goal In this volume leading scholars in the economics of international trade offer rigorous
quantitative analyses of how the institutional design and purpose of the WTO and its progenitor the GATT affect economic
development The volume begins with analyses of market access concessions that have been or could be exchanged between
developing and developed countries from a formal framework for incorporating non tariff measures into a model for
analyzing a multilateral trade agreement to an examination of the MFN most favored nation free rider problem Contributors
then develop new theoretical and econometric approaches for understanding key aspects of trade liberalization under the
GATT WTO that are of particular relevance to economic development considering such topics as achieving cooperation in
eliminating prohibitive trade barriers and the effect of China's export subsidies on its dramatic growth in exports Finally the
book considers two significant new issues that arose from the Uruguay round from which the WTO was formed the TRIPS
agreement regulating intellectual property and the resolution of trade disputes with and without litigation Taken together
these analyses shed new light on the relationship between trade liberalization and economic development as well as the WTO's
effectiveness **International Bibliography of Economics** British Library of Political and Economic Science,1993 IBSS
