Ecology of Coastal Waters K. H. Mann, 2000-05-18 Ecology of Coastal Waters with Implications for Management Second Edition is the most up to date book available on coastal marine ecosystems Students will easily relate to the content of the book as subjects are divided by the environment and scientific principles are applied to steps in the management and the decision making process This is the ideal text for undergraduate and graduate life science students as well as for practicing professionals

Ecology of Coastal Waters Kenneth Henry Mann, 1982-01-01 Ecology and Management of Coastal Waters Gilbert Barnabe, Regine Barnabe-Quet, 2000-10-02 The development and ecology of coastal waters is an increasingly important topic and one which touches a wide range of areas including oceanography hydrology biology ecology fisheries science aquaculture civil engineering geography economics law and the social sciences This book provides a balanced overview allowing the reader to understand exactly what is at stake in the development and management of coastal waters There is no other book currently available which provides such an overview of this important area Divided into three parts the first part provides the background knowledge necessary for an understanding of the physical chemical and biological phenomena of coastal waters Part 2 looks at marine ecology from something other than the traditional view of placing organisms at the centre of the problem and considering them in relation to other organisms and environments instead the authors show how it is possible with marine ecosystems in which the biological physical and chemical components are equally important when defining an entire system Finally an exhaustive review of the available technology for various types of development is provided All in all this book constitutes a succinct and up to date summary of the functions of coastal ecosystems which should be read by all those active in and with an interest in the management and development of coastal seas

Ecology of Baltic Coastal Waters Ulrich Schiewer, 2008-01-12 The first comprehensive overview of the enormous ecological diversity of Baltic coastal ecosystems is presented in this volume provides A short introduction into the Baltic Sea as a reference ecosystem is followed by detailed descriptions of the characteristics of coastal ecosystems Ecological case studies from four regions illustrate the different reactions of these ecosystems to natural and anthropogenic influences

An introduction to Coastal Ecology Patrick J. S. Boaden, 2012-12-06 Studies of marine ecology have traditionally been approached through lectures and field courses devoted mainly to intertidal and inshore habitats and it is surprising in these days of increased awareness of man s environmental impact that so little attention has been given to integrated approaches involving the whole coastal zone and including the terrestrial part which is man s major habitat The

coastal zone has been the subject of extensive investigation not only because of its biological diversity and accessibility but also because of its economic and aesthetic importance to man This book is written with the intention of providing a concise but readable account of coastal ecology for advanced undergraduates and immediate postgraduates We have adopted a habitat organismal approach because we believe that a knowledge of biota and major features of their environment is the best key to an understanding of both larger scale processes such as energy flow and nutrient cycling and smaller scale but equally fundamental processes such as behavioural and physiological ecology Examples have been selected from polar temperate and tropical regions of the world The breadth of the subject has dictated selectivity from sources too numerous to acknowledge individually but we have included an up to date reference list for the main subjects of each chapter

Ecology of Fjords and Coastal Waters H. R. SKJOLDAL, *Coastal Waters of the World* Don Hinrichsen, 2013-03-19 Nearly 60% of the world's population lives and works within 100 miles of a coast and even those who don't are connected to the world's oceans through an intricate drainage of rivers and streams Ultimately the whole of humankind is coastal Coastal Waters of the World is a comprehensive reference source on the state of the world's coastal areas It focuses on the tremendous pressures facing coastal areas and the management systems and strategies needed to cope with them Don Hinrichsen explores the origins and implications of three related issues the overwhelming threats to our coastal resources and seas from population and pollution the destruction of critical resources through unsustainable economic activity and the inability of governments to craft and implement rational coastal management plans Introductory chapters present a concise summary of our coastal problems including coastal habitat degradation and the fisheries crisis along with a discussion of better management options Three case studies of successful coastal governance focus on some of the problems and bring to life potential solutions Following that are regional profiles that provide detailed information on the main population resource and management challenges facing each of the world's thirteen major coastal waters and seas The profiles are presented in a standard format to allow for ease of comparison between regions and accessibility of information The book ends with a realistic and practical agenda for action that can be implemented immediately Safeguarding these complex interlinked ecosystems is humanity's most challenging management job Coastal Waters of the World will help raise our awareness of coastal area concerns and provide a constructive contribution to the ongoing debate over how to manage these ever changing areas both for ourselves and for future generations It will serve as a valuable reference tool and an up to date resource for policymakers management specialists and students interested in sustainable coastal governance
