Development: An Economic Approach Jan Bojö, Karl-Göran Mäler, Lena Unemo, 2013-03-09 This book is the second edition of a text based on a report commissioned by the Swedish International Development Authority SID A The financial grant from SIDA which made the work possible is hereby gratefully acknowledged There are already many books on the market about environmental economics some of them very good What is special about this one We do not claim to have obtained new results but we have our own way of presenting the subject matter In particular we are of the opinion that policy failures are often overlooked as an obstacle to efficient environmental management Although the main emphasis in this book is on project level analysis it is essential that such analyses be linked to an understanding of the disincentives for environmental improvements that general economic and particular environmental policies provide Another essential feature of the book although this is not unique is the links provided between theory and empirical illustrations We hope that this will illustrate to our readers the practical usefulness but also the difficulties of applying economics to environmental problems In particular we hope that the text can be of interest to decision makers development programme personnel teachers and the general public interested in how economics can contribute to better environmental decision making In principle this book can be read by anyone interested in the subject matter without any formal education in economics However some background in microeconomic theory makes the reading easier

Political Economy of the Environment Simon Dietz, Jonathan Michie, Christine Oughton, 2011-02-01 This book is the culmination of several years work by a group of academics policy makers and other professionals looking to understand how alternative economic thinking and indeed thinking from quite different social scientific disciplines could enhance the mainstream economic approach to environmental and natural resource problems Of the editors Dietz comes from the mainstream economics tradition while Michie and Oughton draw explicitly on institutional and evolutionary economics The various authors represent a range of disciplinary backgrounds and approaches This book draws on the strengths of each and all of these approaches to analyse environmental issues and what can be done to tackle these through corporate and public policy The book argues that the need for an interdisciplinary approach Two themes which emerge repeatedly throughout the book are the need for an interdisciplinary theory of technological change and the need for a similarly interdisciplinary approach to the study of human behaviour and how it influences both production and consumption choices The two themes are of course related Resolving environmental questions requires an understanding of their nature of their causes and to the extent that they are anthropogenic of how to change human behaviour These fundamental issues are the focus of the four chapters that form Part 1 of this volume The remainder of the volume develops them in more detail
