**The Economics of Postal Service** Michael A. Crew, Paul R. Kleindorfer, 1992-10-31 Postal service has received considerably less attention in the economics literature than traditional public utilities. Postal service is facing some very important challenges arising out of the increasingly high tech nature of postal service, the entry of competition into the business, and new attitudes on the part of government to postal service. In the United Kingdom and Germany, the increased interest in privatization and recognition of the benefits of competition are likely to have an impact on postal service. These challenges mean that postal managers must learn new ways of doing business, not just in successfully introducing new hardware and in new internal operating procedures, but also in the development of new pricing and costing methodologies and in the introduction of new management information systems. In order to deal with these new developments, managers need a solid foundation in applied microeconomic theory as it relates to postal service. This book encompasses the theoretical foundation for postal policy, particularly with regard to pricing, service quality, and competitive issues.

*The Half-Life of Policy Rationales* Fred E. Foldvary, Daniel B. Klein, 2003-05-03 *The Half Life of Policy Rationales* argues that the appropriateness of policy depends on the state of technology and that the justifications for many public policies are dissolving as technology advances. As new detection and metering technologies are being developed for highways, parking, and auto emissions, and information becomes more accessible and user friendly, this volume argues that quality and safety are better handled by the private sector. As for public utilities, new means of producing and delivering electricity, water, postal, and telephone services dissolve the old natural monopolies and rationales of the government. This volume includes essays on marine resources, lighthouses, highways, parking, auto emissions, consumer product safety, money and banking, medical licensing, electricity, water delivery, postal service, community governance, and endangered species. The editors have mobilized the hands-on knowledge of field experts to develop theories about technology and public policy. *The Half Life of Policy Rationales* will be of interest to readers in public
