

A yellow bulldozer is shown from a low angle, pushing a massive pile of garbage. The trash is a chaotic mix of colors, including bright blue, red, and green plastic, and brown organic waste. The bulldozer's blade is partially visible, pushing the waste forward. The sky above is filled with heavy, grey clouds, and several birds are seen flying in the distance. A black rectangular box with white text is superimposed over the middle of the image.

The Economics of Waste Richard C. Porter, 2010-09-30 In this concise engaging and provocative work Richard Porter introduces readers to the economic tools that can be applied to problems involved in handling a diverse range of waste products from business and households Emphasizing the impossibility of achieving a zero risk environment Porter focuses on the choices that apply in real world decisions about waste Acknowledging that effective waste policy integrates knowledge from several disciplines Porter focuses on the use of economic analysis to reveal the costs of different policies and therefore how much can be done to meet goals to protect human health and the environment With abundant examples he considers subjects such as landfills incineration and illegal disposal He discusses the international trade in waste the costs and benefits of recycling and special topics such as hazardous materials Superfund and nuclear waste While making clear his belief that not every form of waste presents the same amount of risk Porter stresses the need for open minded approaches to developing new policies For students policymakers and general readers he provides insight and accessibility to a subject that others might leave out of sight out of mind or buried under an impenetrable prose of statistics and jargon

The Economics of Waste Management in East Asia Masashi Yamamoto, Eiji Hosoda, 2016-04-14 The existing literature provides very little information on the real and current process of waste disposal and recycling in China China generates large amount of waste and it covers about 20 % of the world waste trade This book

focuses on China's waste management and recycling policy. The book also examines the relationship between China's waste management and recycling industry and its legal structure. It fills in the gap by providing insight into topics on how to resolve China's waste management and recycling problems, theories and empirical studies on waste and management as well as waste management policies in East Asia. It also includes comparative analysis through case studies on other Asian countries such as Thailand and Japan.

The Economics of Residential Solid Waste Management Thomas C. Kinnaman, Don Fullerton, 1999. This paper provides a broad overview of recent trends in solid waste and recycling-related public policy issues and the economics literature devoted to these topics. Public attention to solid waste and recycling has increased dramatically over the past decade both in the United States and in Europe. In response, economists have developed models to help policy makers choose the efficient mix of policy levers to regulate solid waste and recycling activities. Economists have also employed different kinds of data to estimate the factors that contribute to the generation of residential solid waste and recycling and to estimate the effectiveness of many of the policy options employed.

An Economic Analysis of Household Waste Management Chongwoo Choe, 1997. Economic Models and Applications of Solid Waste Management

Hans-Werner Gottinger, 2018-04-09. Originally published in 1991. The dilemma of solid and hazardous waste disposal in an environmentally safe manner has become a global problem. This book presents a modern approach to economic and operations research modelling in urban and regional waste management with an international perspective. Location and space economics are discussed along with transportation technology, health hazards, capacity levels, political realities, and the linkage with general global economic systems. The algorithms and models developed are then applied to two major cities in the world by way of case study, example of the use of these systems.

Report of the Committee on Economics Illinois. Hazardous Waste Task Force. Committee on Economics, 1983. The Economics of Household Garbage and Recycling Behavior Don Fullerton, Thomas C. Kinnaman, 2002. The market for residential solid waste management and disposal has experienced dramatic changes over the past 20 years. This collection of outstanding published research examines these changes and thoroughly analyzes the strategies popularized by municipal governments over the past two decades. Kerbside recycling, unheard of in the 1970s, is currently available to 46% of Americans. Thousands of towns across the nation have also implemented user fees requiring households to pay a fee for every bag of garbage they generate. These policy shifts have attracted the attention of environmental economists interested in knowing the best strategy for managing solid waste. The editors, both long-time scholars of these trends, offer theoretical solutions for the optimal pricing of garbage and recycling collection. They provide original data collection and suggest appropriate econometric techniques that correct for statistical biases. A policy focus provides information relevant to municipal governments as well as researchers. This excellent volume will be useful for policymakers, students, and scholars in environmental economics.

Waste and Recycling Takayoshi Shinkuma, Shunsuke Managi, 2011-04-06. As business as usual has become the mantra of today's world, it's unlikely to see a

decrease in hazardous waste generated from greater economic growth Written by renowned experts the book suggests a solution supported by theoretical arguments to this waste problem The book discusses how main problems for waste management can be addressed through appropriate policies adopted by governments in OECD countries The book also raises thoughtful questions on how household waste management services should be privatized and who should pay for the disposal and recycling costs It attempts to answer these questions The book considers several factors hindering the first best optimal outcome and highlights two crucial ones It elaborates further with models and the solutions on how to overcome these obstacles The book covers not only traditional resource economics and waste management but also the recent problem of Electric waste E waste and illustrates in details how the environments of developing countries are inevitably polluted even with the Basel ban Amendment in place The book proposes an alternative international trading regulation to address E waste This book will certainly appeal to industry decision makers policy makers and legislators

The Economics of Waste and Pollution Management in Japan Fumikazu Yoshida, 2013-03-09 On the threshold of the twenty first century the ordinary Japanese citizen has become acutely aware that various environmental hazards pose a serious threat to daily life such hazards include the problems of waste disposal dioxin and other substances that disturb humans endocrine balance Who a mere decade ago when these problems were first brought to our attention would have anticipated that these environmental problems would so quickly become so common and so serious At the same time environmental problems on a global scale such as ozone depreciation by chlorofluorocarbons CFCs global warming and climate change have become topics of everyday conversation The main objective of this book is to take in these environmental problems focus ing on the two locally important and interrelated issues of waste and pollution This will enable us to investigate the whole range of problems from regionally based pol lution caused by waste disposal and dioxin to the transboundary warming brought about by CO and CFCs We shall thus be able to analyze comprehensively the whole 2 extent of waste and pollution problems ranging from those caused by real garbage and domestic waste to the many kinds of technologically generated waste that result from the production circulation and consumption of industrial goods and services

The Economics of Solid Waste Reduction Robin R. Jenkins, 1993 This book addresses a major policy question regarding the solid waste crisis should municipalities charge households user fees for solid waste services In her study of this issue Professor Jenkins draws on a unique data set which relates the quantities of waste discarded and the prices charged to households for waste services in nine US communities

The Economics of Hazardous Waste and Contaminated Land Hilary Sigman, 2008 Professor Sigman has selected the most authoritative previously published papers for this pathbreaking collection This timely book examines private decision making and government policy for the management of hazardous waste the clean up of contaminated land and the redevelopment of brownfield sites Issues explored include the success of economic incentive policies such as green taxes and tort liability environmental decentralization and attitudes toward risk by both regulators and households The

Waste Management in Spatial Environments Alessio D'Amato, Massimiliano Mazzanti, Anna Montini, 2013-07-18 The increasing scarcity of land and the ever rising amount of waste produced worldwide coupled with the consequent change of focus by policy makers from waste disposal and recovery to waste prevention is boosting research in the economics of waste This volume addresses waste management and waste disposal issues embedding them in spatial systemic and trade related frameworks The collection is policy oriented including socio economic and political science perspectives in order to provide an understanding of real world phenomena and thus maximize its value for policy making The book includes contributions on the linkages between income and waste generation and landfilling such as the waste Kuznets curve conceptual framework in addition to papers that bring together policy oriented analysis of instrument effectiveness and the spatial nature of waste phenomena On top of this there are pieces of research emphasizing technological spillovers and trade at interregional and intercountry levels The comparative analysis of policy effectiveness and efficiency at the regional and country levels is also covered including the assessment of the potential role of illegal management of waste in determining waste performance To give a spatial and comparative flavour the book includes work on the evaluation of waste related externalities with examples covering household industrial and special waste The wide set of methodologies and issues included in this book make it a comprehensive starting point for scholars and policy makers interested in waste related research

Waste and Environmental Policy Massimiliano Mazzanti, Anna Montini, 2011 This research deals with the increasingly complex issues of waste generation waste management and waste disposal that in less developed industrialised countries present diverse but critical concerns It takes a socio economic and policy oriented perspective and provides empirical evidence at EU and regional level The EU and Italy are taken as relevant case studies given the disparities in environmental performances between less and more developed areas The rich and various empirical evidence shows that a robust delinking between waste generation and economic growth is still not present thus future policies should directly address the problem at the source by targeting waste generation in EU countries Some structural factors like population density and urbanisation present themselves as relevant drivers of both waste management and landfill diversion Nevertheless economic and structural factors alone are not sufficient to improve waste performances Though waste policies are to be redesigned by covering the entire area of waste management some first signals of policy effectiveness are arising This work will be of most interest to those students of environmental economics and environmental

sciences as well as policy makers waste utility managers and companies in the waste management sector
