Desde el punto de vista matemático, si el tiempo es considerado como variable continua, la expresión del cambio temporal constituye una ecuación diferencial. Su resolución e imposición de condiciones de contorno permite obtener la función correspondiente. A partir del análisis de la teoría de las ecuaciones diferenciales, se da respuesta a modelos de la teoría económica que requieren un análisis dinámico. Se fundamenta la interpretación económica de los modelos a la luz de la teoría matemática. Aunque está dirigido a estudiantes de Ciencias Económicas, es de aplicación en múltiples orientaciones científicas.
