The English Department W. Ross Winterowd, 1998 To understand the history of English Ross Winterowd insists one must understand how literary studies composition rhetoric studies and influential textbooks interrelate Stressing the interrelationship among these three forces Winterowd presents a history of English studies in the university since the Enlightenment

The Craft of Scientific Writing Michael Alley, 2013-04-18 In October 1984 the weak writing in a scientific report made national news The report which outlined safety procedures during a nuclear attack advised industrial workers to don heavy clothes and immerse themselves in a large body of water The logic behind this advice was sound Water is a good absorber of heat neutrons and gamma rays Unfortunately the way the advice was worded was unclear Was everyone supposed to come up for air Be completely submerged The writing conveyed the wrong impression to the public The report came across as saying go jump in a lake not the impression you want to give someone spending thousands of dollars to fund your research Chances are that Dan Rather will not quote your documents on national television Still your writing is important On a personal level your writing is the way in which people learn about your work When you communicate you receive credit for your work When you do not communicate or are too slow to communicate the credit often goes to someone else On a larger level your writing and the writing of other scientists influence public policy about science and engineering

Science and Technical Writing Philip Rubens, 2002-09-11 With this new edition Science and Technical Writing confirms its position as the definitive style resource for thousands of established and aspiring technical writers Editor Philip Rubens has fully revised and updated his popular 1992 edition with full authoritative coverage of the techniques and technologies that have revolutionized electronic communications over the past eight years

101 Ways to Make Studying Easier and Faster for High School Students Janet Engle, 2008 With many students today participating in extracurricular activities jobs clubs and responsibilities at home it is common to find an area that is lacking studying

Teachers have identified that poor study skills are often to blame. On the other hand, students have found that many of the textbooks and worksheets forced upon them are either boring or difficult to understand. Whether it is bad habits or complicated materials that prevent you from studying well, this book can help you to improve the effectiveness of your studying. After all, effectiveness is not measured by the length of time spent studying but by the level of comprehension. In this new book, you will learn how to make a study schedule, how to design an effective study space, how to read for comprehension, how to get organised, how to find your learning style, how to listen better in class, how to use reference sources, how to boost your concentration, and how to stay motivated. You will learn effective note-taking strategies, where to study, when to study, time management skills, strategies for reading novels and text books, memorisation techniques, and organisational skills. Additionally, you will find out how to stay awake while studying, how to change your current habits, and how to make studying more enjoyable. We will provide you with various studying methods, including flashcards, quizzes, summarising, outlining, answering study guide questions, and the proven SQ3R method, as well as exercises to help improve your skills. Furthermore, the book is full of tips from students just like you, as well as teachers. No two people learn the same way, and no one study method will work for everyone. While this book introduces you to different study methods, the aim is to improve your learning, your understanding, and ultimately your grades.

Guidebook to Academic Writing Cornelia C. Paraskevas, Deborah F. Rossen-Knill, 2024-07-01. This innovative guidebook is an accessible and concise introduction to discipline-specific academic language. Using authentic texts written by both novice and expert writers and translating current corpus-based research of academic language into a practical guide, the book gives students the tools to navigate the linguistic features of various disciplines, emphasizing the humanities and sciences but also discussing example texts from the social sciences. Organised as 11 self-contained questions that are critical to any discussion of academic language, this guide provides specific information and detail regarding the language demands of each discipline, explains the principles underlying punctuation, the range of choices writers have, and the effects of these choices on readers. It includes detailed linguistic guidance on how to construct effective paragraphs, discusses the multiple ways attitude is expressed in academic texts, includes information on citation practices. With exercises and additional online resources, this guidebook provides students with a range of tools they can choose from in order to create effective texts that meet discipline and reader expectations. Accessibly written, it is an essential guide for all students in humanities and sciences writing academic texts in English.

Technical Style J. M. Haile, 2003. Primarily written to aid self-study, this guide offers advice to engineers and other scientific professionals on good technical writing. Engineering educator Haile presents seven chapters on words and phrases, strong sentences, coherent paragraphs, punctuation, equations, tables, graphics, and overall style.
