Harderian Glands Porphyrin Metabolism Behavioral And Endocrine Effects:

Harderian Glands Susan M. Webb, Roger A. Hoffman, Manuel L. Puig-Domingo, Russel J. Reiter, 2012-12-06 Harderian glands first described by Jacob Harder in two species of deer in 1694 are large intraorbital glands which with but few exceptions are found in all land vertebrates. Certainly their relatively large size, their phylogenetic age and persistent conservation in all groups as they emerged from an aqueous to an air land environment lend strong support to the logical deduction that they probably play an important role in the physiological adaptation to terrestrial life. Yet few biologists know even what or where these glands are. For a variety of reasons the Harderian glands have not received the attention they deserve and as a result the published works available have been scarce and scattered throughout the world literature. The current situation is remarkably similar to that which existed in regard to the pineal gland prior to the mid 1960s i.e. scattered literature, unknown function, few investigators and little interest. Yet following a few key papers interest in the pineal gland expanded and soon an explosive increase in the knowledge and understanding of the pineal gland took place and continues today. Will history repeat itself? Originally a few of us discussed the desirability of an informal Symposium on the Harderian glands.

International Review of Cytology, 1996-12-02 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up to date information and directions for future research.

3rd International Multidisciplinary Microscopy and Microanalysis Congress (InterM) Ahmet Yavuz Oral, Zehra Banu Bahsi Oral, 2016-11-09 The 3rd International Multidisciplinary Microscopy Congress InterM2015 held from 19 to 23 October 2015 focused on the latest developments concerning applications of microscopy in the biological, physical and chemical sciences at all dimensional scales, advances in instrumentation techniques and educational materials on microscopy. These proceedings gather 17 peer reviewed technical papers submitted by leading academic and research institutions from nine countries and representing some of the most cutting edge research available.

Chemical Signals in Vertebrates 10 R.T. Mason, Michael P. Lemaster, Dietland Müller-Schwarze, 2006-11-09 The editors and contributors to this volume should be justifiably proud of their participation in the tenth triennial meeting of the Chemical Signals in Vertebrates International Symposium. This meeting was held 27 years after the initial gathering of participants in Saratoga Springs, New York from June 6 to 9, 1976. Subsequent meetings have been held every three years in Syracuse, New York; Sarasota, Florida; Laramie, Wyoming; Oxford, England; Philadelphia, Pennsylvania; Tübingen, Germany; Ithaca, New York; and Krakow, Poland. This tenth anniversary symposium was held from July 29 through August 1 in Corvallis, Oregon and was hosted by the Zoology Department and Biology Programs of Oregon State University. This book also represents the tenth in a series of books on chemical communication, chemical ecology, olfactory and vomeronasal research in vertebrate species. The species covered in

the chapters herein range from fish to mammals including humans By taxonomic breakdown the mammals are the most represented in number of species and chapter contributions However the hosts of the meeting endeavored to have some representative contributions covering all of the major vertebrate taxa As in past years the meeting was well represented with just over 100 participants from 13 different nations Plenary talks focused on some of the non mammalian groups that have tended to be less represented in these symposia Thus we had a very nice overview of comparisons and contrasts of invertebrate chemical communication to vertebrate systems

Histopathology of Preclinical Toxicity Studies Peter Greaves, 2011-10-07 The new 4th edition of Histopathology of Preclinical Toxicity Studies is now completely in full color and continues to describe the pathology found in drug safety studies in laboratory animals with an evidence based discussion of the relevance of these findings to the clinical investigation of new drugs for humans Organized according to organ systems this revision features a thoroughly updated bibliography and discusses new drug induced pathologies and applicable species comparisons to aid in the preclinical safety assessment of new medicines This updated reference is essential for those involved in drug safety evaluation including pathologists toxicologists and pharmacologists working in corporate government academic and research settings This edition is in full color and features nearly 200 high quality images Provides extended commentary on the relevance of pathological findings and features a fully updated bibliography containing sources for further reading Includes new content coverage on the commonly used transgenic animal models that are used in safety assessment specific tumor types induced by drugs in rodents and new drug induced pathologies and lesions

Skin Cancer and UV Radiation Peter Altmeyer, Klaus Hoffmann, Markus Stücker, 2012-12-06 UV radiation is recognized as the major risk factor for skin cancer For the last three decades the incidence and mortality of skin cancer have been increasing steadily in almost all parts of the world Unfortunately there have been very few advances in the management and treatment of skin cancer In comparison to other malignant tumors skin cancer offers the unique opportunity to identify this tumor at an early stage Thus there is strong interest in preventing death by early diagnosis and prompt treatment The proceedings of the International Congress on Skin Cancer and UV Radiation which was held in Bochum Germany in October 1996 reflect the newest scientific standards in the field of skin cancer The conference in Bochum was a platform for leading scientists from all over the world to discuss the complexity and diversity of UV radiation in its interaction with the skin Starting with basic science like physiology immunology and molecular biochemistry of the skin as influenced by UV radiation the book presents a profound survey into the field of skin cancer by focusing on the latest scientific results in prevention early detection treatment and epidemiology The congress in Bochum in 1996 was organized to provide a starting point for coordinated European strategies against skin cancer with internationally renowned scientists

Advances in Chemical Signals in Vertebrates Robert E. Johnston, Dietland Müller-Schwarze, Peter W. Sorenson, 2012-12-06 The field of olfactory research and chemical communication is in the early stages of revolutionary change and many aspects of this revolution are reflected in

the chapters in this book Thus it should serve admirably as an up to date reference First a wide range of vertebrate groups and species are represented Second there are excellent reviews of specific topics and theoretical approaches to communication by odors including chapters on signal specialization and evolution in mammals the evolution of hormonal pheromones in fish alarm pheromones in fish chemical repellents the chemical signals involved in endocrine responses in mice and the controversy over human pheromones Third there are exciting new findings presented in numerous specific topic areas such as the chemis try of pheromones in a wide range of species salamanders to elephants the chemistry of proteins that control the release of pheromones the molecular biology and physiology of detection coding and response to odor signals the effects of experience on sensitivity to odors the role of genes of the immune system in odor production and in human mate choice the function and perception of scent over marks the recognition of individuals and kin by odors the influence of odors on predator prey interactions and the use of odors to help control pests This book is an offshoot of the Eighth International Symposium on Chemical Sig nals in Vertebrates held at Cornell University in Ithaca New York July 20 25 1997 hosted and organized by Bob Johnston **Current Catalog** National Library of Medicine (U.S.),1992 First multi year cumulation covers six years 1965 70 National Library of Medicine Current Catalog National Library of Medicine (U.S.),1992 **Atlas of Histology of the Juvenile Rat** George A Parker,Catherine A. Picut,2016-05-04 Atlas of Histology of the Juvenile Rat should be of interest to toxicologic pathologists toxicologists and other biological scientists who are interested in the histomorphology of juvenile rats For several decades the laboratory rat has been used extensively in nonclinical toxicology studies designed to detect potential human toxicity of drugs agrochemicals industrial chemicals and environmental hazards These studies traditionally have involved young adult rats that are 8 10 weeks of age as studies are started It is becoming increasingly apparent that children and young animals may have different responses to drug chemical exposures therefore regulatory agencies are emphasizing toxicology studies in juvenile animals While the histologic features of organs from young adult and aged laboratory rats are well known less is known about the histologic features of organs from juvenile rats Final histologic maturity of many organs is achieved postnatally thus immature histologic features must be distinguished from chemical or drug related effects While this postnatal organ development is known to exist as a general concept detailed information regarding postnatal histologic development is not readily available The Atlas includes organs that are typically sampled in nonclinical toxicology studies and presents the histologic features at weekly intervals starting at birth and extending through postnatal day 42 Written and edited by highly experienced board certified toxicologic pathologists Includes more than 700 high resolution microscopic images from organs that are typically examined in safety assessment toxicology studies Detailed figure legends and chapter narratives present the salient features of each organ at each time interval Figures are available for further study via Elsevier s Virtual Microscope which allows viewing of microscopic images at higher magnification Valuable resource for toxicologic pathologists who are confronted with

interpretation of lesions in juvenile rats in situations where age matched concurrent controls are not available for comparison e g with unscheduled decedents Figures are available for further study on ScienceDirect with Virtual Microscope which allows viewing of microscopic images at higher magnification
