Harnessing Markets For Biodiversity Towards Conservation And Sustainable Use:

Harnessing Markets for Biodiversity Dan Biller, Organisation for Economic Co-operation and Development. Working Group on Economic Aspects of Biodiversity, 2003-06-04 Governments and the business sector are increasingly recognising the potential of biodiversity products and services markets which can help to promote the sustainable use and conservation of biodiversity Some are already being profitably marketed but private markets also need to be supported by appropriate public policies This publication provides a conceptual framework to help identify and promote the use of markets in the biodiversity policy arena and draws on the findings of a joint OECD World Bank workshop held in Paris in January 2001 It discusses the concept of public goods and considers four examples of emerging markets organic agriculture sustainable forestry non timber forest products such as natural cosmetics and herbal medicines and genetic resources *Harnessing Markets for Biodiversity*, 2003 Biodiversity losses continue at an alarming rate Policies are therefore urgently needed to promote the sustainable use and conservation of biodiversity Governments and private sector actors are increasingly recognising the potential of harnessing markets to help arrest the degradation of biodiversity The private provision of biodiversity products and services is proving to be quite feasible in some circumstances Some biodiversity products and services are already being profitably marketed Private markets also need to be supported by appropriate public policies This publication provides a conceptual framework for market creation in the biodiversity policy arena as well as several examples of where the use of markets can assist policy makers and society at large in the search for more sustainable use and conservation of biodiversity

Handbook of Market Creation for Biodiversity Organisation for Economic Co-operation and Development, 2004-11-25 This publication contains a synthesis of market approaches to biodiversity aimed at promoting the compatibility of biodiversity protection with economic development objectives It considers public policy options to facilitate the operation of biodiversity friendly markets to ensure that collective preferences for conservation and sustainable use are reflected in economic outcomes Chapters discuss development of a conceptual framework appropriate property right institutions the economic value of biodiversity incentives for market creation policy mixes for biodiversity and practical examples and case studies on implementation of market creation *Corporate Biodiversity Management for Sustainable Growth* Ravi Sharma, Aparna Watve, Amitabh Pandey, 2020-05-11 This book aims to cover the multitude of corporate approaches towards mainstreaming biodiversity conservation and ecological management in policies and action plans and explores the roles of these efforts in achieving national and global targets for the Sustainable Development Goals SDGs The book addresses various aspects of corporate actions such as corporate environmental responsibility green businesses market based approaches to biodiversity conservation and biodiversity trade offs and includes concept papers reviews and case studies presenting qualitative and quantitative research Additionally the text compares and assesses examples of positive and negative impacts of corporate involvement in biodiversity conservation in developed and developing countries to identify

innovative approaches and the best practices and models that can be replicated in diverse environmental conditions The studies included in the book will help those working in the field of corporate involvement in biodiversity conservation and outline the strengths and weaknesses of the approaches which will be useful for designing new environmental management action plans in the face of climate change The book will also be of great value to researchers academicians policy makers civil society groups policy think tanks and conservation managers

Wild Species as Commodities Curtis Freese, 2012-06-22 In recent years some policymakers and conservationists have argued that natural resources will be protected only if economic benefits accrue to those who are responsible for caring for the resources Such commercial consumptive use of wild species CCU provides an economically viable alternative to more ecologically destructive land uses and could help accomplish the overall goals of biodiversity conservation Yet many questions remain Will the harvest of wild species be sustainable Will habitats be protected What tradeoffs are implied for the populations and ecosystems under management While this debate goes on researchers and managers are confronting an array of real world problems in managing harvested populations of wild species Wild Species as Commodities presents a balanced scientifically rigorous consideration of the link between CCU and biodiversity conservation The outgrowth of a four year World Wildlife Fund study the book is both a synthesis of findings and a practical guide Topics examined include forestry fisheries sport hunting and nontimber forest products the economics of wild species use social and institutional frameworks required for sustainability ecological impacts biodiversity consequences of ecosystem specialization conservation benefits of wild species use management principles and guideline Wild Species as Commodities provides a primer on the CCU biodiversity link and an interdisciplinary analysis of the major economic social and ecological factors involved along with guidelines for incorporating biodiversity conservation into commercial harvesting programs It is a highly accessible source of information concepts and management approaches for professionals in resource management and wildlife conservation and academics in conservation biology environmental and ecological economics and environmental studies

Building Biodiversity Business Joshua Bishop, 2008 The challenge of building biodiversity business is not trivial Biodiversity is still largely neglected by private finance There is a need to develop new business models and market mechanisms for biodiversity conservation and to persuade the public and policymakers that biodiversity or component ecosystem services can be conserved on a commercial basis Based on extensive consultation and analysis the authors of this new report conclude that there are numerous pro biodiversity business opportunities that can generate positive financial returns as well as real biodiversity benefits

[Integrating Biodiversity Conservation and Sustainable Use](#) Graham Bennett, 2004 IUCN's 5th World Parks Congress 2003 concluded that parks should not exist as unique islands but need to be planned and managed as an integral part of the broader landscape Ecological networks provide an operational model for conserving biodiversity that is based on ecological principles and allow a degree of human use of

the landscape This publication illustrates the development of several ecological networks around the world demonstrating their benefits both for conservation and sustainable development **Biodiversity, Conservation, and Sustainable**

Development Clement Allan Tisdell,1999 This important book highlights the conflicts between economic growth and the conservation of nature in the context of sustainable development It places particular emphasis on biological diversity and examines possible policies for resolving conflicts which arise from the contrasting goals of conserving the natural environment and economic growth The book opens with an overview of the challenges of economics nature conservation and sustainable development and goes on to discuss general principles and broad policies Case studies from China and north east India help illustrate important economic and social principles involved in nature conservation General issues examined include the value of environmental and resource economics in planning sustainable development the importance of biodiversity conservation for sustainable development and for the stability and sustainability of ecological systems the impact of economic globalization and market systems on the conservation of nature priorities for the financial support of protected areas the extent to which ecotourism can be harnessed to reconcile economic utilisation of an area with nature conservation the costs and benefits of conservation financing the management of nature reserves This book will be essential reading for economists interested in the environment ecology and development Biodiversity for Sustainable Development K.P.

Laladhas,Preetha Nilayangode,Oommen V. Oommen,2016-11-15 Divided into three sections this book explores the three main pillars of sustainable development namely economy environment and society and their interlinkages at the regional level The first section Access and Benefit Sharing ABS for sustainable development focuses on international agreements and national legislation as well as the challenges in implementing ABS in e g India In turn the second section examines the process of forming Biodiversity Management Committees BMCs at the Local Self Government LSG level to promote environmental sustainability highlighting local and community level conservation initiatives that have led to the conservation of habitats and species The third section addresses poverty eradication and food security The case studies included demonstrate how the combination of traditional knowledge and modern techniques can enhance the productivity of traditional crop varieties yielding greater benefits for communities The aim of this volume is to disseminate the lessons learned from these case studies as well as the findings from projects already in place which can offer recommendations that can be applied to similar problems elsewhere in an attempt to find environmental solutions for sustainable development Further it introduces readers to new approaches to inclusive development demonstrating that participation and grass root empowerment are key drivers of equitable and sustainable development *The Use of Economic Measures in National Biodiversity Strategies and Action Plans* Lucy Emerton,2001 Economic forces underlie and explain much biodiversity degradation and loss and economic instruments provide a useful set of tools for strengthening biodiversity conservation sustainable use and equitable benefit sharing If National Biodiversity Strategies and Action Plans are to be effective they must be justifiable in economic terms

This document reports on a project reviewing the use of economic measures in NBSAPs. It brings together the component activities of the economics review and summarizes and synthesizes this information to provide guidance on experiences, lessons learned and ways forward in the use of economic measures. *Biodiversity Conservation* Charles A. Perrings, Karl-Göran Mäler, Carl Folke, C.S. Holling, Beng-Owe Jansson, 2012-12-06. This book reports the more policy oriented results of the Biodiversity programme of the Royal Swedish Academy of Sciences Beijer Institute. The programme brought economists and ecologists together to consider where the problem in biodiversity loss really lies, what costs it has for society and how it might best be addressed. The results are strikingly different from those reported in other works on the subject. Biodiversity loss matters for all ecosystems, not just the megadiversity tropical forests. And it matters because it compromises the resilience and so the productivity of those systems. Biodiversity conservation requires the development of policies that change the behaviour of resource use everywhere, not just in parks and reserves. The book is required reading for researchers and policy makers alike. It canvasses options for the reform of park management, biodiversity conservation, property rights, tax, trade and price regimes that are within the reach of governments everywhere. Global Action for Biodiversity Timothy Swanson, 2013-11-19. At the Rio Earth Summit in 1992, the nations of the world adopted the Convention on Biological Diversity. Since then, over 160 countries have ratified the Convention; three Conferences of the Parties have taken place and a permanent secretariat has been established. Despite this, there remains a lot of uncertainty and even more controversy about what the Convention was intended to accomplish and how it was to do so. This book, published in association with the IUCN, The World Conservation Union, sets out to answer some of these questions by recounting the history of the movements leading up to the Convention but especially by analysing the forces giving rise to the problem. It provides a specific set of policy prescriptions intended to facilitate the development of institutions and obligations within the international community which will give real effect to the aspirations of the Convention and ensure that it has some real effect at ground level. The author begins with an overview of the issues and then develops the basic nature of the problems within a bio-economic framework. He highlights the gaps in the Convention which remain to be filled, offers detailed explanations of the concepts involved and describes the nature of the solutions required. Thus he sets out a detailed plan for global action in support of an effective international convention for the conservation of biological diversity. The book is an excellent introduction to a very topical debate and a valuable reference point for conservationists, policy makers and students of development studies, environmental studies, environmental policy and conservation biology. Enterprising Nature Jessica Dempsey, 2016-08-02. Winner of the 2018 James M. Blaut Award in recognition of innovative scholarship in cultural and political ecology. *Enterprising Nature* explores the rise of economic rationality in global biodiversity law, policy and science. To view Jessica's animation based on the book's themes, please visit <http://www.bioeconomies.org/enterprising-nature>. Examines disciplinary apparatuses, ecological-economic methodologies, computer models, business alliances and regulatory conditions creating the

conditions in which nature can be produced as enterprising Relates lively firsthand accounts of global processes at work drawn from multi site research in Nairobi Kenya London England and Nagoya Japan Assesses the scientific technical geopolitical economic and ethical challenges found in attempts to enterprise nature Investigates the implications of this will to enterprise for environmental politics and policy Conserving Biodiversity National Research Council, Board on Science and Technology for International Development, 1992-02-01 The loss of the earth's biological diversity is widely recognized as a critical environmental problem That loss is most severe in developing countries where the conditions of human existence are most difficult Conserving Biodiversity presents an agenda for research that can provide information to formulate policy and design conservation programs in the Third World The book includes discussions of research needs in the biological sciences as well as economics and anthropology areas of critical importance to conservation and sustainable development Although specifically directed toward development agencies non governmental organizations and decisionmakers in developing nations this volume should be of interest to all who are involved in the conservation of biological diversity

Living Off Biodiversity Izabella Koziell, International Institute for Environment and Development, 2001 This book attempts to explore different natural resource sectors and to identify possibilities for mainstreaming the conservation and sustainable use of biodiversity into these sectors but without compromising livelihoods in the process It advocates leveraging incremental change within the existing natural resource sectors through research policy change development and demonstration of alternative approaches There are six chapters that discuss these issues in the forestry agricultural livestock and fisheries sectors and within rangelands A discussion on insect diversity and livelihoods also constitutes a separate chapter The whole book is framed by an introduction and macro economic perspective on how to start to resolve the conflicts between conservation and development Editor **Environmental Policy Instruments for Conserving Global**

Biodiversity Oliver Deke, 2008-03-29 If you can believe all things are possible to him who believes Mark 9:23 The current unprecedented loss of global biodiversity as a result of anthropogenic interference in the world's ecosystems is affecting human well being across the globe with increasing severity It therefore represents a major challenge in international environmental policymaking With the Convention on Biological Diversity CBD the community of states has recognized the increasing importance of preserving biodiversity Given the extensive context of biodiversity loss and preservation this study focuses on two issues which are at the center of the public discussion regarding the objectives of conservation and the sustainable use of biodiversity and that are addressed by specific policy instruments The first issue is the regulation of cross border trade in genetic information and genetic resources Here the question is whether the commercial use of genetic information derived from biodiversity can create incentives for its preservation The second issue involves the conservation of biodiversity through the protection of ecologically valuable ecosystems from human use Here the question is how the protection of these natural areas and the consequent restriction of destructive human use can be organized effectively on an

Brechin, Peter R. Wilshusen, Crystal L. Fortwangler, Patrick C. West, 2012-02-01 How can the international conservation movement protect biological diversity while at the same time safeguarding the rights and fulfilling the needs of people particularly the poor Contested Nature argues that to be successful in the long term social justice and biological conservation must go hand in hand The protection of nature is a complex social enterprise and much more a process of politics and of human organization than ecology Although this political complexity is recognized by practitioners it rarely enters into the problem analyses that inform conservation policy Structured around conceptual chapters and supporting case studies that examine the politics of conservation in specific contexts the book shows that pursuing social justice enhances biodiversity conservation rather than diminishing it and that the fate of local peoples and that of conservation are completely intertwined

Biodiversity Wilhelm Barthlott, Matthias Winiger, 1998-03-18 The preservation of biodiversity is an essential part of the global concept for sustainable development Ecologically and socially acceptable management of biodiversity is a prerequisite for the preservation of the wealth and productivity of natural ecological systems and maintenance of the cultural differences in the relationship between man and nature The Agenda 21 adopted at the Rio Summit in 1992 calls for concerted action by governments governmental and non governmental organizations and the scientific community for the preservation of biodiversity
