Neurostimulation: Exploring Perceptual & Cognitive Enhancement Adam Joseph Toth, Mark J. Campbell, Adam Bruton, 2025-08-06 Research investigating the use of electrical or magnetic stimuli to alter the electrophysiology of the central and peripheral nervous systems has flourished in recent years The popularity of these techniques largely stems from their ability to create temporary lesions or enhancements in nervous system function To date a plethora of literature has emerged examining the role of neurostimulation for augmenting motor function due to the relative ease of objectively quantifying changes in behavior performance and even motor evoked potential amplitudes within individual muscles However the role of neurostimulation in enhancing perceptual and cognitive abilities is under examined and is an area that is now continually gaining research attention Evaluating the role of various forms of neurostimulation on cognitive and perceptual abilities can be challenging due to the lack of control over the underlying neural activity in the central nervous system and the sensitivity with which current measurement tools and tasks quantify cognitive and perceptual functioning This research topic aims to facilitate the publication of high quality methodologically sound research that addresses the quantification and effect that various forms of neurostimulation have on cognitive and perceptual processes across the lifespan In doing so we endeavor to help advance the field of neurostimulation with respect to robustly mapping the effect of neurostimulation on cognitive and perceptual performance

The Ophelia Paradox Mortimer R. Kadish, 2018-04-17 In Shakespeare s Hamlet when Ophelia tells King Claudius Lord we know what we are but know not what we may be she implies more than that we can never know what will happen next that we have no grounds on which to make significant decisions in the conduct of our lives She herself had done little or nothing to bring about her present state Now she is quite mad Claudius too could never have guessed where he would end Yet the rest of us although not significantly more knowing than they profess to think we can actually make Me decisions which genuinely good reasons will support Experience seems

to have convinced us that deficient in self knowledge though we may be sometimes the arrow of decision reaches its mark Kadish examines how decisions in the conduct of our lives are possible how they may be justified and what the limits of that justification might be for a self that defines itself in a context of social change Although the need for self justification tends to be regarded as a weakness this book suggests that it may also be regarded as the inevitable outcome of the desire to make justifiable decisions those for which on reflection one can approve oneself The prime problem of the conduct of life according to Kadish is to say when one can and when one cannot justify oneself for one's conduct not to others but to oneself He proposes that through self judgment individuals develop that very self interest in virtue of which they endeavor to choose one course of action rather than another He proposes also that they justify and form themselves through their self identification as members of communities in conflict and in process of transformation From this difficult social and human condition the basic problems of ethical and social theory together with the possibility of a theory of good reasons are held to arise In the present time of discontent and emphasis on change in social economic and political life The Ophelia Paradox has a particular pertinence to the prospects for resolving the basic issues of conduct It should be of interest to philosophers sociologists and psychologists and of special relevance to anyone concerned with the interrelationships of ethics art and law
