**Biological Calcification: Cellular and Molecular Aspects** Harald Schraer, 2012-12-06 The deposition of calcium containing salts is a widespread phenomenon in both the plant and animal kingdoms Its occurrence suggests a generalized biological adaptation to environments rich in calcium Indeed the Archaean ocean was rich in calcium carbonate and traces of ancient organisms have been found in lime stones estimated to be about 2 7 billion years old The fundamental nature of biological calcification makes it a subject of interest not only to the student of calcium metabolism and skeletal physiology but also to biologists in general As in many areas of biological science recent progress in this field has been rapid and no attempt was made here to cover all the biological systems in which calcification is an important facet of the organisms method of operation Calcification is approached in this volume at the levels of the cellular sites and molecular mechanisms that are involved in this process The ultrastructural and chemical features of the cells and their products which are associated with calcification are emphasized in several chapters The editor in inviting contributions from authors intended that collectively the chapters should convey a sense of the ubiquitous and essential nature of the role of calcification in several phyla of the plant and animal kingdoms The researchers were biochemists physical chemists cell biologists and physiologists some represented medicine and dentistry all were interested in

**Human Tooth and Developmental Dental Defects** Ana Gil De Bona, Hakan Karaaslan, 2022-07-27. The unique tissues of human teeth, enamel and dentin, have been studied by scientists to understand their structure, physical and chemical properties, and the developmental machinery behind these extraordinary properties. During the developmental process, genetic and environmental factors or the interplay between them may cause defects in dental hard tissues, impairing their biology and function. These defects have long been studied to provide better

dental care and to find novel treatment options Understanding the mechanical chemical and structural differences in developmental dental defects is also crucial for a routine dental practice as many of these lesions do not have pathognomonic properties This book focuses on the qualitative and quantitative properties of the sound enamel and dentin as well as the affected human tooth structures It examines how genetics impact oral and dental health the role of fluoride and trace elements in mineralization and the related clinical implications and the impact of different approaches to diagnose and treat these developmental disorders

**Dental Composite Materials for Direct Restorations** Vesna Miletic, 2017-11-25 This book covers both basic scientific and clinically relevant aspects of dental composite materials with a view to meeting the needs of researchers and practitioners Following an introduction on their development the composition of contemporary composites is analyzed A chapter on polymerization explains the setting reactions and light sources available for light cured composites The quality of monomer to polymer conversion is a key factor for material properties Polymerization shrinkage along with the associated stress remains among the most challenging issues regarding composite restorations A new classification of dental composites is proposed to offer more clinically relevant ways of differentiating between commercially available materials A review of specific types of composites provides an insight into their key issues The potential biological issues of dental composites are reviewed in chapters on elution of leachable substances and cariogenicity of resin monomers Clinical sections focus on material placement finishing procedures and the esthetics and clinical longevity of composite restorations Bonding to tooth tissues is addressed in a separate chapter as is the efficiency of various composite repair methods The final chapter discusses future perspectives on dental composite materials
