Harmonic Maps Conservation Laws And Moving Frames:

Harmonic Maps, Conservation Laws and Moving Frames Frédéric Hélein, 2002-06-13 Publisher Description

Harmonic Morphisms, Harmonic Maps and Related Topics Christopher Kum Anand, Paul Baird, John Colin Wood, Eric Loubeau, 1999-10-13 The subject of harmonic morphisms is relatively new but has attracted a huge worldwide following. Mathematicians, young researchers and distinguished experts came from all corners of the globe to the City of Brest site of the first international conference devoted to the fledgling but dynamic field of harmonic morphisms. *Harmonic Morphisms, Harmonic Maps and Related Topics* reports the proceedings of that conference, forms the first work primarily devoted to harmonic morphisms, bringing together contributions from the founders of the subject, leading specialists and experts in other related fields. Starting with *The Beginnings of Harmonic Morphisms* which provides the essential background, the first section includes papers on the stability of harmonic morphisms, global properties, harmonic polynomial morphisms, Bochner technique, f-structures, symplectic harmonic morphisms and discrete harmonic morphisms. The second section addresses the wider domain of harmonic maps and contains some of the most recent results on harmonic maps and surfaces. The final section highlights the rapidly developing subject of constant mean curvature surfaces. *Harmonic Morphisms, Harmonic Maps and Related Topics* offers a coherent, balanced account of this fast-growing subject that furnishes a vital reference for anyone working in the field.

The Analysis of Harmonic Maps and Their Heat Flows Fanghua Lin, 2008 This book contains the proceedings of the Fourth Meeting on CPT and Lorentz Symmetry held at Indiana University in Bloomington on August 8-11, 2007. The Meeting focused on experimental tests of these fundamental symmetries and on important theoretical issues, including scenarios for possible relativity violations. Experimental subjects covered include astrophysical observations, clock comparison measurements, cosmological birefringence, electromagnetic resonant cavities, gravitational tests, matter interferometry, muon behavior, neutrino oscillations, oscillations and decays of neutral mesons, particle-antiparticle comparisons, post-Newtonian gravity, space-based missions, spectroscopy of hydrogen and antihydrogen, and spin-polarized matter. Theoretical topics covered include physical effects at the level of the Standard Model, General Relativity and beyond, the possible origins and mechanisms for Lorentz and CPT violations, and associated issues in field theory, particle physics, gravity, and string theory. The contributors consist of the leading experts in this very active research field.

Constant Mean Curvature Surfaces, Harmonic Maps and Integrable Systems Frédéric Hélein, 2012-12-06 This book intends to give an introduction to harmonic maps between a surface and a symmetric manifold and constant mean curvature surfaces as completely integrable systems. The presentation is accessible to undergraduate and graduate students in mathematics but will also be useful to researchers. It is among the first textbooks about integrable systems, their interplay with harmonic maps, and the use of loop groups, and it presents the theory for the first time from the point of view of a differential geometer. The most important results are exposed with complete proofs, except for the last two chapters which require a minimal knowledge

from the reader Some proofs have been completely rewritten with the objective in particular to clarify the relation between finite mean curvature tori Wente tori and the loop group approach an aspect largely neglected in the literature The book helps the reader to access the ideas of the theory and to acquire a unified perspective of the subject

Numerical Methods for Nonlinear Partial Differential Equations Sören Bartels, 2015-01-19 The description of many interesting phenomena in science and engineering leads to infinite dimensional minimization or evolution problems that define nonlinear partial differential equations While the development and analysis of numerical methods for linear partial differential equations is nearly complete only few results are available in the case of nonlinear equations This monograph devises numerical methods for nonlinear model problems arising in the mathematical description of phase transitions large bending problems image processing and inelastic material behavior For each of these problems the underlying mathematical model is discussed the essential analytical properties are explained and the proposed numerical method is rigorously analyzed The practicality of the algorithms is illustrated by means of short implementations

Harmonic Maps James Eells, 1992 These original research papers written during a period of over a quarter of a century have two main objectives The first is to lay the foundations of the theory of harmonic maps between Riemannian Manifolds and the second to establish various existence and regularity theorems as well as the explicit constructions of such maps

An Introduction to the Regularity Theory for Elliptic Systems, Harmonic Maps and Minimal Graphs Mariano Giaquinta, Luca Martinazzi, 2013-07-30 This volume deals with the regularity theory for elliptic systems We may find the origin of such a theory in two of the problems posed by David Hilbert in his celebrated lecture delivered during the International Congress of Mathematicians in 1900 in Paris 19th problem Are the solutions to regular problems in the Calculus of Variations always necessarily analytic 20th problem does any variational problem have a solution provided that certain assumptions regarding the given boundary conditions are satisfied and provided that the notion of a solution is suitably extended During the last century these two problems have generated a great deal of work usually referred to as regularity theory which makes this topic quite relevant in many fields and still very active for research However the purpose of this volume addressed mainly to students is much more limited We aim to illustrate only some of the basic ideas and techniques introduced in this context confining ourselves to important but simple situations and refraining from completeness In fact some relevant topics are omitted Topics include harmonic functions direct methods

Hilbert space methods and Sobolev spaces energy estimates Schauder and L^p theory both with and without potential theory including the Calderon Zygmund theorem Harnack's and De Giorgi Moser Nash theorems in the scalar case and partial regularity theorems in the vector valued case energy minimizing harmonic maps and minimal graphs in codimension 1 and greater than 1 In this second deeply revised edition we also included the regularity of 2 dimensional weakly harmonic maps the partial regularity of stationary harmonic maps and their connections with the case $p = 1$ of the L^p theory including the celebrated results of Wente and of Coifman Lions Meyer Semmes

Harmonic Maps: Selected Papers By James Eells And Collaborators James Eells, 1992-08-21 These original research papers written during a period of over a quarter of a
