Kofi Agawu,2025-03-25 An award winning account of the importance of semiotic play in Classic instrumental music including that of Mozart Haydn and Beethoven Of all the repertoires of Western Art music none is as explicitly listener oriented as that of the late eighteenth and early nineteenth

centuries Yet few attempts to analyze the so called Classic Style have embraced the semiotic implications of this fact In *Playing with Signs* Kofi Agawu proposes a listener oriented theory of Classic instrumental music that encompasses its two most fundamental communicative dimensions expression and structure Units of expression defined in reference to topoi are shown here to interact with confront and merge into units of structure defined in terms of the rhetorical conventions of beginning continuing and ending The book draws on examples from works by Mozart Haydn and Beethoven to show that the explicitly referential even theatrical surface of Classic music derives from a play with signs Although addressed primarily to readers interested in musical analysis the book opens fruitful avenues for further research into musical semiotics aesthetics and Classicism

Composition, Chromaticism and the Developmental Process Henry Burnett, 2017-07-05 Musicology having been transmitted as a compilation of disparate events and disciplines has long necessitated a magic bullet a unified field theory so to speak that can interpret the steady metamorphosis of Western art music from late medieval modality to twentieth century atonality within a single theoretical construct Without that magic bullet discussions of this kind are increasingly complicated and to make matters worse the validity of any transformational models and ideas of the natural evolution of styles is questioned and even frowned upon today as epitomizing a grotesque teleological bigotry Going against current thinking Henry Burnett and Roy Nitzberg claim that the teleological approach to observing stylistic change is still valid when considered from the purely compositional perspective The authors challenge the traditional understanding of development and advance a new theory of eleven pitch tonality as it relates to the corpus of Western composition The book plots the evolution of tonality and its bearing on style and the compositional process itself The theory is not based on the diatonic aspect of the various tonal systems exploited by composers rather the theory is chromatically based the chromatically inflected octave being the source not only of a highly ingenious developmental dialectic but also encompassing the moment to moment progression of the musical narrative itself Even the most profound teachings of Schenker and the often startlingly original and worthwhile speculations of Riemann Tovey Dahlhaus and others still provide no theory of development and so are ultimately unable to unite the various tendrils of the compositional organism into a unified whole Burnett and Nitzberg move beyond existing theory and analysis to base their theory from the standpoint of chromatic pitch fields These fields are the specific chromatic pitch choices that a composer uses to inform and design a complete composition utilizing
