Elseviers Dictionary Of Marine Pollution:

Elsevier's Dictionary of Marine Pollution Louis-Jacques Zilberberg, 1998 Our modern economies consume annually about 4 6 billion metric tons of crude oil a third of which is shipped across the oceans Along the way about 3 million metric tons are lost into the environment primarily through handling in ports but also leakage at sea So the threat of a major ecological disaster is always present for example the Exxon Valdez Braer and Sea Empress accidents In addition to oil leakage from tankers considerable quantities of oil enter the sea from operational discharges or bunker spills Fortunately current international agreements though not always strictly enforced have greatly reduced the threat of oil pollution The oceans are faced with an onslaught from many other sources The potential for radioactive pollution of the seas through dumping of nuclear wastes or an accident to a ship carrying radioactive nuclear wastes has never been absent from the public mind Recently people have become more aware of the terrible consequences of a major chemical pollution as well the polluting potential of ships NOx emissions The uncontrolled discharge of ballast waters too has become an international problem through the transfer to various parts of the world of nonindigenous species which may have detrimental effects on our local ecosystems and human societies This dictionary contains terms covering the following fields and subfields The shore morphology and physical description clean up at sea and on the shore fishing activities and marine farming chemical pollution containers the IMDG code and HNS substances radioactive pollution dumping and the London Convention The ship pollution and casualty reports radar navigation pilotage TSS communications towing and SAR operations the sea wave and weather conditions people on board ship Legal legal aspect of marine pollution For sample pages please contact the publisher *Elsevier's Dictionary of Medicine and Biology* G. Konstantinidis, 2005-08-18 Dictionaries are didactic books used as consultation instruments for self teaching They are composed by an ordered set of linguistic units which reflects a double structure the macrostructure which correspond to the word list and the microstructure that refers to the contents of each lemma The great value of dictionaries nests in the fact that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms This dictionary contains a total of about 27 500 main English entries and over of 130 000 translations that should normally sufficiently cover all fields of life sciences The basic criteria used to accept a word a part of the dictionary during the development period in order of importance were usage up to dateness specificity simplicity and conceptual relationships The dictionary meets the standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing fields of cell biology biochemistry molecular biology immunology developmental biology microbiology genetics and also the fields of human anatomy histology pathology physiology zoology and botany The fields of ecology paleontology systematics evolution biostatistics plant physiology plant anatomy plant histology biometry and lab techniques have been sufficiently covered but in a more general manner The latest Latin international anatomical terminology Terminologia Anatomica or TA has been fully incorporated and all anatomical

entries have been given their international Latin TA synonym This dictionary will be a valuable and helpful tool for all scientists teachers students and generally all those that work within the fields of life sciences The Facts on File Dictionary of Marine Science Barbara Charton, John Tietjen, 2008 The Facts On File Dictionary of Marine Science New Edition contains nearly 3 000 entries *Coastal and Deep Ocean Pollution* Andres Hugo Arias, Sandra Elizabeth Botte, 2020-03-10 During the recent decades social political and academic endeavours have been made to improve environmental quality and reduce pollution In particular the ocean sea and coastal areas show varying degrees of impact from the multiple human activities carried out in the terrestrial as well as in the aquatic environment Ecology is a science which studies the relationship between organisms and the surrounding environment and in the modern era the marine world is getting increasing attention For centuries it has been the final reservoir of human garbage later it became an oil farm with a concomitant increase of coastal population growth and unplanned growth of the fishing industry and the increasing use of sea routes for cargo transport and recreational uses cruises All this led to rising contamination with negative effects on biota and even human health It is then imperative to know the current situation of the world s oceans that is the main purpose of this book to document at a glance the latest research in the field of ocean pollution **Elsevier's Dictionary of Acronyms, Initialisms, Abbreviations and Symbols** Fioretta. Benedetto Mattia, 2003-09-30 The dictionary contains an alphabetical listing of approximately 30 000 thirty thousand acronyms initialisms abbreviations and symbols covering approximately 2 000 fields and subfields ranging from Pelagic Ecology to Anthrax Disease Artificial Organs to Alternative Cancer Therapies Age related Disorders to Auditory Brainstem Implants Educational Web Sites to Biodefense Biomedical Gerontology to Brain Development Cochlear Implants to Cellular Phones Constructed Viruses to Copper Metabolism Drug Discovery Programs to Drug resistant Strains Eugenics to Epigenetics Epilepsy Drugs to Fertility Research Genetically Modified Foods Crops to Futuristic Cars Genetic Therapies to Glycobiology Herbicide tolerant Crops to Heritable Disorders Human Chronobiology to Human gene Therapies Immunization Programs to Lunar Research Liver Transplantation to Microchip Technology Mitochondrial Aging to Molecular Gerontology Neurodegenerative Diseases to Neuropsychology of Aging Neurosurgery to Next Generation Programs Obesity Research to Prion Diseases Quantum Cryptography to Reemerging Diseases Retinal Degeneration to Rice Genome Research Social Anthropology to Software Development Synchrotron Research to Vaccine Developments Remote Ultrasound Diagnostics to Water Protection Entomology to Chemical Terrorism and hundreds of others as well as abbreviations acronyms initialisms relating to European Community and U S Japanese and International Programs Projects Initiatives from year 2000 up to 2010 as well as World Bank Programs *Elsevier's Dictionary of Containers and Dangerous Goods* L.J. Zilberberg, 2004-12-11 The dictionary contains approx 6 000 terms related to containers and dangerous goods medical terms in relation to accidents involving dangerous goods chemicals most frequently involved in accidents segregation terms and groups reglementation of dangerous goods conventions codes and directives

organisations and acronyms This dictionary will concentrate mainly on the technical vocabulary relating to containerisation and the transport of hazardous and noxious substances as it would appear that that particular sector is rather poorly documented

Elsevier's Dictionary of Geography Vladimir Kotlyakov, Anna Komarova, 2006-12-20 Geography is a system of highly developed sciences about the environment Geographical science embracing the study of the Earth's physical phenomena people and their economic activities has always been in need of an extensive terminology Geographical terms are related to the terms of natural sciences physics chemistry biology geology etc and humanities history economics sociology etc since geography is based on these fundamental subjects Geography includes a number of disciplines and subdivisions which appeared along with the development of the science In spite of being very different geographical disciplines have some common tools of investigation which is maps comparative method of exploration remote sensing geoinformation systems Today very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages However they are not always well correlated Nowadays geographical terminology requires unification and international correlation more than ever before Hence the idea of compiling a multilingual polydisciplinary dictionary The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered Each entry consists of the term in English and its equivalents in Russian French German Spanish Short definitions of terms are given in English and in Russian The terms are supplied with the necessary grammar labels such as gender of nouns plural number etc The Dictionary combines two functions that of a defining dictionary and that of a bilingual dictionary These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations differing in the shades of meanings thus giving him the possibility to choose the appropriate word But in our Dictionary we intentionally decided to combine the two functions defining and multilingual because a short definition of the term and equivalents in other languages help to achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages Having this into consideration we deliberately mixed two types of dictionaries in one Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of terms from English to Russian French German Spanish

Library Journal, 2001 Includes beginning Sept 15 1954 and on the 15th of each month Sept May a special section School library journal ISSN 0000 0035 called Junior libraries 1954 May 1961 Also issued separately

Elsevier's Dictionary of Soil Science A. Canarache, I.I. Vintila, I. Munteanu, 2006-10-17 This dictionary includes some 9200 terms each with a definition and often an additional descriptive text in English the terms being translated in French German and Spanish It is more complete than similar previously published dictionaries or glossaries and contains all fields of soil science as well as some adjacent fields of other earth sciences agriculture and engineering Present

concepts and definitions are detailed along with earlier concepts not only for historical reasons but also for developing new ideas Concepts terms and definitions usual in literature of various countries are discussed and compared to offer an appropriate exchange of ideas Soil classifications and methodologies for soil investigation coming from a score of European American and other countries and international organisations are presented and correlations between names of soil taxa in different classifications are suggested Readers active in all branches of soil science will find accessible answers to many of their questions either directly referring to procedures used in the organisations where they work or related to way of thinking in other countries Readers active in other branches but needing information on soils will also find answers to this dictionary of great assistance to their research Over 9200 terms with definitions in English and translations in French German Spanish Includes all fields of soil science and many connected sciences All present day terminology with inclusion of earlier classical concepts and terms Terminology in current USDA Soil Taxonomy FAO World Reference Base or Soil Resources and other documents from different countries Granted the N Cernescu award from the Romanian Academy on Agricultural and Forestry Sciences

Morphogenesis, Environmental Stress and Reverse Evolution Jean Guex, John S. Torday, William B. Miller Jr., 2020-07-23 It is widely acknowledged that life has adapted to its environment but the precise mechanism remains unknown since Natural Selection Descent with Modification and Survival of the Fittest are metaphors that cannot be scientifically tested In this unique text invertebrate and vertebrate biologists illuminate the effects of physiologic stress on epigenetic responses in the process of evolutionary adaptation from unicellular organisms to invertebrates and vertebrates respectively This book offers a novel perspective on the mechanisms underlying evolution Capacities for morphologic alterations and epigenetic adaptations subject to environmental stresses are demonstrated in both unicellular and multicellular organisms Furthermore the underlying cellular molecular mechanisms that mediate stress for adaptation will be elucidated wherever possible These include examples of reverse evolution by Professor Guex for Ammonites and for mammals by Professor Torday and Dr Miller This provides empiric evidence that the conventional way of thinking about evolution as unidirectional is incorrect leaving open the possibility that it is determined by cell cell interactions not sexual selection and reproductive strategy Rather the process of evolution can be productively traced through the conservation of an identifiable set of First Principles of Physiology that began with the unicellular form and have been consistently maintained as reflected by the return to the unicellular state over the course of the life cycle
