Elsevier's Electronic Bibliography Z. Deyl, J. Janák, V. Schwarz, 2000 This bibliography is the updated and revised edition of Elsevier's Electronic Bibliography Analytical Separations that was first published in 1998. Covering the years 1990 to 1999, this new edition deals with all categories of chromatographic and electromigration types of separation. The basic categories of classification are techniques and applications. For each of the 100 000 articles, the authors' names, full title, journal of publication, and page numbers are given. The complete bibliography can be fully searched on these areas as well as technique and subject. Additional features: Now covering the years 1989-1999. Includes ca. 20 000 new articles in separation science. Yearly updates to follow. Search time is reduced with a new user interface. Customised searches on author, title, journal, year of publication, technique, and subject. To facilitate searches, articles have been classified by a team of experts in 150 unique categories. Users can print and/or save the results of database searches using the Built-in Report Function. The MakeRef Function allows for insertion of bibliographic information directly into documents. The whole database has been structured into a format that allows for migration to a web environment.

Separations Chemistry Fedor Macášek, James D. Navratil, 2016-06-06 Separation of chemical species is a gate to final success of synthesis and preparation of compounds in pure and defined state. Variability of natural and artificial mixtures to be treated is enormous. Task of chemistry is to separate components of homogeneous mixtures: the gaseous and liquid solutions. The book concentrates on understanding the basic philosophies of both equilibrium and nonequilibrium chemical thermodynamics and engineering performance that lay in principle of separation technique such as distillation, crystallization, centrifugation, sorption, membrane separations, chromatography, and liquid-liquid extraction. Specific phenomena connected with photochemical separation, isotope composition, and radioactivity are discussed as well. The book is written for advanced students of chemistry having the knowledge of physical chemistry. Calculation examples are based on the international system of units. Unique list of over 1300 full references covers scientific literature of the eighteenth to the twenty-first centuries.

A Century of Separation Science Haleem J. Issaq, 2001-12-19 A Century of Separation Science presents an extensive overview of the critical developments in separation science since 1900, covering recent advances in chromatography, electrophoresis, field-flow fractionation, countercurrent chromatography, and supercritical fluid chromatography for high speed and high throughput analysis.
