McDermott, 2016-07-27 Some climate change is now inevitable and strategies to adapt to these changes are quickly developing The question is particularly paramount for low income countries which are likely to be most affected This timely and unique book takes an integrated look at the twin challenges of climate change and development The book treats adaptation to climate change as an issue of climate resilient development rather than as a bespoke set of activities flood defences drought plans and so on combining climate and development challenges into a single strategy It asks how the standard approaches to development need to change and what socio economic trends and urbanisation mean for the vulnerability of developing countries to climate risks Combining conceptual thinking with practical policy prescriptions and experience the contributors argue that to address these questions climate risk has to be embedded fully into wider development strategies Agricultural
