The "Other" Psychology of Julian Jaynes Brian J. McVeigh, 2018-01-17 In his provocative but critically acclaimed theory about the origin of introspectable mentality Julian Jaynes argued that until the late second millennium people possessed a different psychology a two chambered bicameral neurocultural arrangement in which a commanding god guided admonished and ordered about a listening mortal via voices visions and visitations Out of the cauldron of civilizational collapse and chaos an adaptive self reflexive consciousness emerged better suited to the pressures of larger more complex sociopolitical systems Though often described as boldly iconoclastic and far ahead of its time Jaynes's thinking actually resonates with a second or other psychological tradition that explores the cultural historical evolution of psyche Brian J McVeigh a student of Jaynes points out the blind spots of mainstream establishment psychology by providing empirical support for Jaynes's ideas on sociohistorical shifts in cognition He argues that from around 3500 to 1000 BCE the archaeological and historical record reveals features of hallucinatory super religiosity in every known civilization As social pressures eroded the god centered authority of bicamerality an upgraded psychology of interiorized self awareness arose during the Late Bronze Age Collapse A key explanatory component of Jaynes's theorizing was how metaphors constructed a mental landscape populated with I's and me's that replaced a declining worldview dominated by gods ancestors and spirits McVeigh statistically substantiates how linguo conceptual changes reflected psychohistorical developments because supernatural entities functioned in place of our inner selves vocabularies for psychological terms were strikingly limited in ancient languages McVeigh also demonstrates the surprising ubiquity of hearing voices in modern times contending that hallucinations are bicameral vestiges and that mental imagery a controllable semi hallucinatory experience is the successor to the divine hallucinations that once held societies together This thought provoking work will appeal to anyone interested in the transformative power of metaphors the development of mental lexicons and the adaptive role of hallucinations

Relational Being Kenneth J. Gergen, 2009-07-30 This book builds on two current developments in psychology scholarship and practice The first centers on broad discontent with the individualist tradition in which the rational agent or autonomous self is considered the fundamental atom of social life Critique of individualism springs not only from psychologists working in the academy but also from communities of therapy and counseling The second and related development from which this work builds is the search for alternatives to individualist understanding Thus therapists such as Steve Mitchell along with feminists at the Stone Center expand the psychoanalytic tradition to include a relational orientation to therapy The present volume will give voice to the critique of individualism but its major thrust is to develop and illustrate a far more radical and potentially exciting landscape of relational thought and practice that now exists Most existing attempts to build a relational foundation remain committed to a residual form of individualist psychology The present work carves out a space of understanding in which relational process stands prior to the very concept of the individual More broadly the book attempts to develop a thoroughgoing relational account of human activity In doing so Gergen reconstitutes the mind as a

manifestation of relationships and bears out these ideas in a range of everyday professional practices including family therapy collaborative classrooms and organizational psychology
