This book provides an overview of fetal psychobiological research focusing on brain and behavior genetic and epigenetic factors affecting both short and long term development and technological breakthroughs in the field. These focal points intersect throughout the chapters as in the challenges of evaluating the fetal central nervous system, the myriad impacts of maternal stressors and resiliencies and the salience of animal studies. It also discusses specific monitoring and assessment methods including cardiotocography, biomagnetometry, 4D ultrasound in utero, MRI and the KANET test. Spanning assessment, identification and pre and postnatal intervention, the book weighs the merits of standardized evaluations and argues for more integrative research in the future. Included in the coverage: Effects on the fetus of maternal anxiety, depression and stress during pregnancy; Clinical and experimental research in human fetuses and animal models; Observational research including the use of behaviors in developing tests to assess fetal health; Fetal auditory processing and implications for language development; Fetal effects of prenatal exposure to selective serotonin reuptake inhibitors (SSRIs); Structural and functional imaging of the prenatal brain; The effects of alcohol exposure on fetal development; Fetal Development Research on Brain and Behavior; Environmental Influences and Emerging Technologies. Embryonic and Fetal Development South Carolina. Department of Health and Environmental Control, 1995 **Gamete and Embryo-fetal Origins of Adult Diseases** He-Feng Huang, Jian-Zhong Sheng, 2013-11-19

The book *Gamete and Embryo-fetal Origins of Adult Diseases* introduces various diseases resulting from the abnormal gametogenesis and embryo development which manifests as growth retardation, birth defects or increased susceptibility to chronic metabolic diseases such as diabetes, cardiovascular disease and cancer in childhood and adult life, even fertility disorders and the risk of transgenerational transmission. Six common kinds of these diseases are discussed in separate chapters. The authors explore the connections between these diseases and epigenetic reprogramming, rapid cell differentiation and organ formation and environmental influences including assisted reproductive technology and adverse intrauterine environments. With a summary of findings on the causes and progression of adult diseases at the phase of gametogenesis and embryo development, this book provides insights into the pathogenesis of disease and aids in the treatment and prevention of disease, meeting the requirement for improving the quality of the newborn population and effectively preventing and curing major diseases at an early stage. This book offers new perspectives and will be an enlightening resource for obstetricians, paediatricians, epidemiologists, endocrinologists and sanitarians.
