

# Cardiac Emergency

## Check patient

### Signs of SCA

- ▶ Unconscious
- ▶ Not breathing
- ▶ No circulation (no pulse)

If victim is unresponsive, activate the chain of survival; a series of steps and procedures, which together could save the life of a sudden cardiac arrest (SCA) victim.

**1**

### Call for help

Stay with the victim; send someone to CALL 911 and return with the AED.

**2**

### Start CPR

Begin CPR immediately to circulate oxygenated blood to the brain and body. As soon as the AED arrives, use it.

**3**

### Early Defibrillation

1. Turn on AED
2. Follow audible instructions
3. Press the shock button, if advised.

**4**

### Advanced Care

Have someone direct the paramedics to the scene and update them on the status of the victim.

### Act Fast!

SCA is the leading cause of death in the United States. The time between the onset of symptoms and the arrival of medical help is critical. Every minute that passes without CPR decreases the chance of survival by 10%.

### Importance of CPR

Without CPR, the brain and heart will stop. CPR keeps the blood flowing to the brain and heart, giving the body a better chance to respond to the defibrillation shock.

### AEDs Are Safe

AEDs are safe and easy to use. They will only deliver a shock if it is needed. They are simple to operate, and they will not harm the victim. AEDs are designed to be used by anyone, even someone who has never used one before.

Notice where AEDs are located.

A sudden cardiac arrest (SCA) is a life-threatening condition that can occur without warning. Knowing how to respond quickly can increase the victim's chance of survival.

In an emergency
