Gut Hormones:

Gastrointestinal Hormones Silvano Paternoster, Damien Keating, Marco Falasca, 2019-12-19 **Developmental Biology of Gastrointestinal Hormones** M. Wabitsch, C. Posovszky, 2017-08-16 The gut not only represents the largest endocrine organ of the human body but is also profoundly involved in the control of metabolism through peptide hormones. Therefore gastrointestinal hormones are acting via autocrine, paracrine and classical endocrine pathways and regulate e.g. digestion, hunger and satiety. Furthermore they are important regulators of body weight, growth and glucose metabolism as well as of mood and behavior. Physicians and scientists in the field of pediatric endocrinology and diabetes as well as in pediatric gastroenterology require an extensive understanding of the origin of enteroendocrine cells, factors controlling their differentiation, hormone gene expression, secretion function and finally the complex interaction with other organs, especially the central nervous system. In order to meet these needs, experts in the field have written up to date comprehensive and illustrated reviews presenting the current knowledge in the field of gastrointestinal endocrinology with a pediatric view. Those reviews comprise this latest volume of Endocrine Development Gastrointestinal Hormones Viktor Mutt, 2013-10-22. **Advances in Metabolic Disorders Volume 11 Gastrointestinal Hormones** covers the developments in the study of gastrointestinal GI hormones. The book discusses the cytochemical techniques in work with GI hormones, the general aspects and problems for the radioimmunoassays of GI hormones in the 80s and the response of the GI hormone system to the pathological changes. The text also describes the evolutionary aspects of GI hormones, the cell membrane receptors for secretagogues on pancreatic acinar cells and the synthesis of GI hormones using organic chemical or recombinant DNA techniques. Gastrin is reviewed with regard to its forms and fragments in tissues, circulating components during post and perisecretory processing, cellular origins and distribution, actions and structure-function relations, metabolic disposal, nervous and chemical control for its release and its role in human pathology. The book further tackles the chemical, anatomical and biological studies on gastrin-releasing peptides as well as the physiological actions of gastric inhibitory polypeptide. Discussions about the vasoactive intestinal peptide, incretin, enteroglucagon, neuropeptide Y, peptide HI, galanin, cholecystokinin, 58 neuropeptide K, peptide YY, motilin, somatostatin, 28 neurotensin, substance P and opioid peptides are also encompassed. The text concludes by looking into the investigations on the structure and function of the head activator in hydra and in mammals. Molecular biologists, endocrinologists, histochemists, physiologists and those involved in the research about GI hormones will find the book invaluable. **Gut Hormones** Stephen Robert Bloom, Julia M. Polak, 1981 **Gut Hormones in Disease**, 1983 **Bibliography of Medical Reviews**, 1971 **Growth of the Gastrointestinal Tract (1990)** Jean A. Morisset, Travis E. Solomon, 2017-11-22 This book provides an up to date summary of the large body of data regarding gastrointestinal hormones and growth factors involved in the development and maintenance of the architecture and physiological functions of the different organs of the digestive tract. The regulation of growth and differentiation in the

Update on Mechanisms of Hormone Action Gianluca Aimaretti, Flavia Prodam, Paolo Marzullo, 2011-10-26 The purpose of the present volume is to focus on more recent aspects of the complex regulation of hormonal action in particular in 3 different hot fields metabolism growth and reproduction Modern approaches to the physiology and pathology of endocrine glands are based on cellular and molecular investigation of genes peptide hormones protein cascade at different levels In all of the chapters in the book all or at least some of these aspects are described in order to increase the endocrine knowledge

Hormone Assays in Biological Fluids Michael J. Wheeler, William D. Fraser, J. S. Morley Hutchinson, 2008-02-04 Expert researchers who have developed and applied significant new assays describe in step by step detail a variety of methods for measuring a broad variety of hormones related peptides and synthetic steroids in various biological fluids The hormones measured range from glucocorticoids in biological fluids urinary steroids aldosterone in blood and plasma renin activity to gut hormones in plasma melatonin prolactin 6-sulphatoxymelatonin and androgens in blood saliva and hair The emphasis is on noncommercial assays so that investigators can set up novel methods suited to their special needs Commercial assays are also described for comparative purposes Tutorials on radioimmunoassay gas chromatography mass spectrometry high performance liquid chromatography and PCR techniques help the reader to choose the best method for his or her purpose
