H D And The Image:

H.D. and the Image Rachel Connor,2004 H D and the Image is the only book length study to explore how H D s involvement with the moving image from her appearance in avant garde films to her experience of film editing and her discursive writing on cinema informs the textual practice of her poetry and prose Focusing on the eclecticism of H D s intellectual pursuits and drawing on a broad theoretical framework which includes gender film and cultural theory the book makes a significant contribution to the increasingly multidisciplinary field of transatlantic modernist studies **Message Digests for Photographic Images and Video Contents** Frédéric Lefèbvre,2004 New multimedia database search tools require rapidity compression image quality and copyright control The two latter are often covered by embedding a hidden watermark signal in the multimedia content More effective and recognized multimedia search methods are using hash functions Hash functions compute very short signatures characteristically very different from one media to another Typical requirement of hash functions are easily computable provide short output bit length and collision resistant In this thesis an image hashing method for multimedia contents is presented as an innovative solution for content identification and indexing This new one way function for images extract some image features by different computations along radial projections The magnitude of change is related to the amount of the change of the media image video In watermarking hashing enables the creation of payloads that depend on the media content and which are thus resistant to the copy attack and collusion This thesis is available in the SIMILAR collection under the label Presses universitaires de Louvain ISBN 2 930344 58 X and may be purchased online at www i6doc com **Remote Sensing for Field-based Crop Phenotyping** Jiangang Liu,Zhenjiang Zhou,Bo Li,2024-02-12 Dynamic monitoring of crop phenotypic traits e g LAI plant height biomass nitrogen yield et al is essential for exploring crop growth patterns breeding new varieties and determining optimized strategies for crop management Traditional methods for determining crop phenotypic traits are mainly based on field sampling handheld instrument measurement and mechanized high throughput platforms which are time consuming and have low efficiency and incomplete spatial coverage The development of crop science requires more rapid and accurate access to field based crop phenotypes Remote sensing provides a novel solution to quantify crop structural and functional traits in a timely rapid non invasive and efficient manner With the development of burgeoning remote sensing sensors and diversified algorithms a range of crop phenotypic traits have been determined including morphological parameters spectral and textural characteristics physiological traits and responses to abiotic biotic stresses in different environments In addition research advances in varying disciplines beyond agricultural sciences such as engineering computer science molecular biology and bioinformatics have brought new opportunities for further development of remote sensing based methods and technologies to gain more quantitative information on crop structure and function in complex environments *High Definition Cinematography* Paul Wheeler,2009 First Published in 2009 Routledge is an imprint of Taylor Francis an informa company *Robotic Surgery and*
