**B. Marjorie Wilson**

## **Habitat Of Palaeozoic Gas In N W Europe:**

**Habitat of Palaeozoic Gas in N.W. Europe** James Brooks, Jeremy C. Goff, Berend Van Hoorn, 1986 **Petroleum Geology of the Southern North Sea** Karen Ziegler, Stephen R. Daines, P. Turner, Peter Turner, 1997 *Paleozoic Plays of NW Europe* A. A. Monaghan, J. R. Underhill, A. J. Hewett, J. A. E. Marshall, 2019-03-06 North Sea and onshore Netherlands and Germany Paleozoic hydrocarbon plays across parts of NW Europe remain relatively under explored both onshore and offshore This volume brings together new and previously unpublished knowledge about the Paleozoic plays of NW Europe to describe significant additional exploration opportunities outside and below existing plays The volume contains papers on Paleozoic plays in the North Sea Irish Sea onshore UK France and Switzerland They highlight how improvements in seismic data quality and the availability of previously unpublished well datasets form the basis for improved understanding of local to regional interpretations that move forward from generalized basin development models The improved structural trap and source rock basin definition feeds to better constrained locally variable burial uplift maturation and migration models Particularly notable are the significant mapped extents and thickness of Paleozoic source reservoir and seal rocks in areas previously dismissed as regional highs and platforms **Petroleum Geology of NW Europe** B. Levell, M. Bowman, 2018-02-15 Published by the Geological Society on behalf of PGC Ltd 1 hardback volume in slipcase The 8th Conference on the Petroleum Geology of NW Europe was held in September 2015 and marked the 50th anniversary of the first commercial discovery offshore in the North Sea West Sole in September 1965 Its focus was 50 Years of Learning a Platform for Present Value and Future Success and its objective was to provide an update on discoveries developments technologies and geological concepts from the region The 39 extensively illustrated technical papers cover the full width of recent activity and are divided into the following sections Plays and fairways Play assessment Recent successes and learnings from failures Infrastructure led exploration and development Late life fields re development and the next life Onshore exploration and development The proceedings volume follows the format of many of the previous conferences since the first in 1974 Collectively these provide a unique documentation of the discovery and development of several NW European hydrocarbon provinces The volume will be of interest to all geoscientists involved in exploration and development in NW Europe It provides a fascinating overview of how creativity can continue to reveal hidden resources in an area that has been called mature for at least the last 20 of its 50 year history United Kingdom Oil and Gas Fields G. Goffey, J.G. Gluyas, 2020-12-03 Geological Society Memoir 52 records the extraordinary 50 year journey that has led to the development of some 458 oil and gas fields on the UKCS It contains papers on almost 150 onshore and offshore fields in all of the UK s main petroliferous basins These papers range from look backs on some of the first developed gas fields in the Southern North Sea to papers on fields that have only just been brought into production or may still remain undeveloped and includes two candidate CO2 sequestration projects These papers are intended to provide a consistent summary of the exploration

appraisal development and production history of each field leading to the current subsurface understanding which is described in greater detail As such the Memoir will be an enduring reference source for those exploring for developing producing hydrocarbons and sequestering CO<sub>2</sub> on the UKCS in the coming decades It encapsulates the petroleum industry's deep subsurface knowledge accrued over more than 50 years of exploration and production Petroleum Geology of the North Sea K. W. Glennie, 2009-06-29 Since the 3rd edition of this publication emphasis within the petroleum industry has shifted from exploration to appraisal and development of existing hydrocarbon resources This change is reflected in this new 4th edition which has been significantly expanded to accommodate additional material The centrepiece of the book however remains a series of descriptions in stratigraphic order of the depositional history and hydrocarbon related rock units of the North Sea Geology of Gas and Oil under the Netherlands H.E. Rondeel, D.A.J. Batjes, W.H. Nieuwenhuijs, 2012-12-06 Contains 21 papers on the petroleum geology of the Netherlands combining work by the industry the Geological Survey and universities The wide range of topics presented includes reservoir characterization through 3D seismic and borehole log evaluation of single oil and gas fields as well as reviews of the hydrocarbon habitat in the West Netherlands Basin and of the regional Rotliegend facies distribution Published in association with the Royal Geological and Mining Society of the Netherlands KNGMG which hosted the 1993 International Conference in the Hague of the American Association of Petroleum Geologists The papers were prepared for this conference Audience Staff engaged in hydrocarbon exploration and production in the North Sea area Others who need to know about the results of this exploration and production in the Netherlands

*Petroleum Geology of the Irish Sea and Adjacent Areas* Neil S. Meadows, 1997 This text provides a snapshot of current understanding on the petroleum geology of the East Irish Sea and adjacent areas **Mesozoic Resource Potential in the Southern Permian Basin** B. Kilhams, P.A. Kukla, S. Mazur, T. McKie, H.F. Mijndieff, K. van Ojik, 2018-08-31 The Southern Permian Basin as its name suggests is a historical heartland for hydrocarbon production from the Palaeozoic Rotliegend interval However in this mature basin the Mesozoic presents further possibilities to offer resource security to NW Europe Such opportunities include increasing efficiency in the production of discovered hydrocarbons exploration for further hydrocarbons both conventional and unconventional and efficient exploration for and production of geothermal energy All these potential resources require a grounding in technically sound geoscience via traditional scientific observation and the application of new technologies to unlock their value The main aim of this volume is to bring together the work of academics and industry workers to consider cross border geoscience including contributions on Poland Germany The Netherlands the United Kingdom and adjacent areas The work presented intends to contribute to the development and discovery of further Mesozoic energy resources across the basin *Permo-carboniferous Magmatism and Rifting in Europe* B. Marjorie Wilson, 2004 Petroleum Geology of Northwest Europe J. R. Parker, 1993 Geology of the Netherlands Johan Veen, Geert-Jan Vis, Jan Jager, Theo Wong, 2025-10-01 Below the famously flat surface of the Netherlands lies a fascinating

world of buried mountains and valleys which can only be unraveled with drillings geophysical techniques and geological understanding Thorough exploration for hydrocarbons groundwater and minerals produced a wealth of data and knowledge about the Dutch subsurface and its various uses The second edition of this book originally published in 2007 provides access to that wealth with a thoroughly revised and updated description of the Paleozoic to recent geology of the Netherlands including the offshore It covers applied geology with chapters on oil and gas coal and peat rock salt groundwater construction minerals silica sand underground storage and sequestration and geothermal energy It treats the natural and anthropogenic geohazards of seismicity and subsidence Finally it illustrates how data and knowledge of the Dutch subsurface are disseminated by the Geological Survey of the Netherlands part of research and technology organisation TNO Geology of the Netherlands is a comprehensive reference work for geologists engineers geoscience students and all others who wish to know more about the relevance and applications of geology in the Netherlands *The Geology of Central Europe:*

petroleum geologic aspects It will be of interest to petroleum geologists hydrogeologists geochemists and reservoir geologists

***The Geology of England and Wales*** P. J. Brenchley, Peter Franklin Rawson, 2006 This second edition of *The Geology of England and Wales* is considerably expanded from its predecessor reflecting the increase in our knowledge of the region and particularly of the offshore areas Forty specialists have contributed to 18 chapters which cover a time range from 700 million years ago to 200 million years into the future A new format places all the chapters in approximately temporal order Both offshore and economic geology now form an integral part of appropriate chapters

***Combustion*** Maximilian Lackner, Árpád Palotás, Franz Winter, 2013-07-08 *Combustion* the process of burning is defined as a chemical reaction between a combustible reactant the fuel and an oxidizing agent such as air in order to produce heat and in most cases light while new chemical species e g flue gas components are formed This book covers a gap on the market by providing a concise introduction to combustion Most of the other books currently available are targeted towards the experienced users and contain too many details and or contain knowledge at a fairly high level This book provides a brief and clear overview of the combustion basics suitable for beginners and then focuses on practical aspects rather than theory illustrated by a number of industrial applications as examples The content is aimed to provide a general understanding of the various concepts techniques and equipment for students at all level as well as practitioners with little or no prior experience in the field The authors are all international experts in the field of combustion technology and adopt here a clear didactic style with many practical examples to cover the most common solid liquid and gaseous fuels The associated environmental impacts are also discussed so that readers can develop an understanding of the major issues and the options available for more sustainable combustion processes With a foreword by Katharina Kohse Hoinghaus

**Tectonic Evolution of the North Sea Rifts** Derek John Blundell, A. D. Gibbs, 1990 This volume presents an up to date account of the development of the North Sea Rift system and its associated sedimentary basins with contributions by leading researchers The work examines tectonic and palaeogeographic development using evidence from proposed crustal

models and discusses the geological mechanism of rifting and its influence on the structure and patterns of sedimentation in the basins and their bearing on the potential for oil and gas accumulation A comprehensive gravity map is included
