comets then this is the book for you Hockey is a real story teller when he relates the discovery of Hale Bopp he shows how the roles played by both amateur and professional astronomy knit together Hockey writes in a casual easy to read style which makes concepts clear without resorting to math I especially recommend this book for teachers and their students Prof Mary Kay Hemenway Astronomer University of Texas at Austin Education Officer American Astronomical Society I find the book to be a rare gem in the popular science canon which by my personal standards covers a fascinating subject is of relevance to the scientific community and well written Bruce Gain Editor Earth Space Review The interested public will find this book both entertaining and informative Prof Thomas E Cravens Astronomer University of Kansas A fascinating introduction to the recently discovered Comet Hale Bopp America Online The Comet Hale Bopp Book is a nicely illustrated guide It has been targeted at the novice and or younger audience and meets this objective admirably The text is written in a modern easy to read style and is littered with analogies which help the reader relate to such things as astronomical distance scales and the like Chapter three is typical of the books excellent non technical narrative The author manages to discuss gravity and orbital dynamics in just 9 pages yet leaves the reader with a clear understanding of how and why comets orbit the Sun This book is a lucid well written text and is well suited to help the novice comet enthusiast discover the delights of comet watching Vello Tabur Comet Discoverer *Popular Mechanics*, 1995-12 [Inside Out](#) Dana Xavier Kerola, 2009-05-27 This work is a new look at the age old philosophical question of the mind body duality The author adeptly demonstrates that there is not really any conflict in the two seemingly opposing views When it is realized that the universe is governed purely by physical laws the supposed dichotomy dissolves Inspired by his long running exploration of the panorama of pop music the author blends in references to song lyrics as he explains the ways in which the lives of human beings are inextricably tied to the larger precedent world of planets stars and galaxies His personal reflections on reality include topics ranging from the epistemology of satellite remote sensing to fundamental discussions of anthropology astronomy and atmospheric science He also offers thoughtful commentary on our quest to continue present and future space exploration as he forecasts what will become of the universe and us in the very distant future *Inside Out Looking for Ourselves in Time and Space* will appeal to both the general reader and research scientists alike **Proceedings of the First International Conference on Comet**

of the Solar system they are objects of key scientific research and space missions As one of nature s most potent and dramatic dangers they pose a threat to our safety and yet they were the origin of our oceans and perhaps even life itself This beautifully illustrated book tells the story of the biggest and most awe inspiring of all comets those that have earned the title Great Robert Burnham focuses on the Great comets Hyakutake in 1996 and Hale Bopp in 1997 which gripped attention worldwide because for many they were the first comets ever seen He places these two recent comets in the context of their predecessors from past ages among them the famous Comet Halley Great Comets explains the exciting new discoveries that have come from these magnificent objects and profiles the spaceprobes to comets due for launch in the next few years The book even takes a peek behind Hollywood s science fiction fantasies to assess the real risks humanity faces from potential impacts of both comets and asteroids For everyone interested in astronomy this exciting book reveals the secrets of the Great Comets and provides essential tools for keeping up to date with comet discoveries in the future Robert Burnham has been an amateur astronomer since the mid 1950s He has been a senior editor of Astronomy magazine 1986 88 and is the author of many books and CD ROMS including Comet Hale Bopp Find and Enjoy the Great Comet and Comet Explorer

Composition and Origin of Cometary Materials K. Altwegg,P. Ehrenfreund,Johannes Geiss,W.F. Huebner,2012-12-06 Comet nuclei are the most primitive bodies in the solar system They have been created far away from the early Sun and their material properties have been altered the least since their formation Thus the composition and structure of comet nuclei provide the best information about the chemical and thermodynamic conditions in the nebula from which our solar system formed In this volume cometary experts review a broad spectrum of ideas and conclusions based on in situ measurement of Comet Halley and remote sensing observations of the recent bright Comets Hale Bopp and Hyakutake The chemical character of comet nuclei suggests many close similarities with the composition of interstellar clouds It also suggests material mixing from the inner solar nebula and challenges the importance of the accretion shock in the outer nebula The book is intended to serve as a guide for researchers and graduate students working in the field of planetology and solar system exploration Several special indexes focus the reader s attention to detailed results and discussions It concludes with recommendations for laboratory investigations and for advanced modeling of comets the solar nebula and the collapse of interstellar clouds

Hunting and Imaging Comets Martin Mobberley,2010-10-08 For many astronomers the holy grail of observation is to discover a comet not least because comets always bear the name of their discoverer Hunting and Imaging Comets was written for comet hunters and digital imagers who want to discover rediscover monitor and make pictures of comets using astronomical CCD cameras and DSLRs The old days of the purely visual comet hunter are pretty much over but this is not to say that amateurs have lost interest in finding comets The books also covers the discovery of comet fragments in the SOHO image data CCD monitoring of older comets prone to violent outbursts the imaging of new NEOs Near Earth Objects that have quite often been revealed as comets not asteroids by amateur astronomers and the finding of recent
