21st superscript st century Science has never been stronger in shaping the world we live in progress in medical science during most of the last century has helped to transform health care and prolong our lives almost daily advances in biological science promise hope for the future and yet medical science has been in serious decline for the past three decades Biomedical Science in the 21st superscript st Century Sunset or New Dawn sets out the recent decline in the context of medical science s stunning past successes Professor Sheridan discusses the failure to translate new discoveries in biological science into medical advances the dramatic decline in research productivity in the pharmaceutical industry in the context of falling numbers of clinical scientists the disruption of medical science during prolonged and repeated reforms of health care delivery changing social and political attitudes towards health care and science the loss of trust in big pharmaceutical companies and recent revelations of fraud in science The book deals with the creative nature of original science how it is driven by curiosity and self motivation and how these can be stifled by pettifogging managerialism The book presents a vision of what medical science can deliver during the coming half century and what is needed to overcome the present challenges It questions the assumptions that big is best in the organisation of science and suggests a new model for drug development based on a restoration of trust and a more constructive relationship between regulators and industry a **Passages of a Working Life During Half a Century: with a Prelude of Early Reminiscences** Charles Knight,1873 **Computers and Society in the Past Half Century** Abbe Mowshowitz,2024-04-17 Almost fifty years ago the author wrote the first comprehensive critical study of social issues in computing *The Conquest of Will* 1976 This new book revisits this seminal study featuring an overview of technological advances over the past half century and provides a unique comparison between what was believed and expected of computers back in 1976 and actual outcomes up to the present time Despite the extraordinary changes in technology much of what has emerged in contemporary society was anticipated fifty years ago and we are still grappling with some of the same basic challenges For example the computer s threat to privacy has been a constant issue ever since the late 1950s but the regulatory framework designed in the 1960s has been upended by the Internet Artificial Intelligence too has been a contentious issue since the late 1950s but until recently discussion was largely confined to academia and there was little urgency to regulate its further development and application The comparisons offered in this book will highlight what we got right and wrong in the past and point to the sources of good and bad predictions While there have been many studies of social issues in computing published since *The Conquest of Will* appeared in 1976 this is an unusual and valuable longitudinal comparison of the current situation with what prevailed and was predicted half a century ago *A Half-century of Chemistry in America, 1876-1926* American Chemical Society,1926
