Fossil Nonmarine Ostracoda Of The United States:

Fossil Nonmarine Ostracoda of the United States F.M. Swain Jr., 1999-04-06 The geographic and stratigraphic distribution of fossil nonmarine Ostracoda in the United States are summarized in this book followed by diagnoses of the subject species references to literature and 34 plates of illustrations This work shows the great diversity and usefulness of this interesting class of organisms which are small bivalved aquatic crustaceans that occupy both marine and nonmarine environments Many are characteristic of estuarine and other tidal habitats but only a few occupy hypersaline waters One or two kinds are found in wet soils or in leaf or flower cups in tropical rain forests A few live in caves and others are commensal in gills of fish and other aquatic animals Micropaleontologists have found their shells in many types of sedimentary rocks and have used them for stratigraphic and paleoenvironmental interpretations Their relatively rapid rates of evolution have made them useful in subsurface stratigraphy and their sensitivity to environmental changes has provided a means of recognizing variations in rock facies In nonmarine aquatic rocks they are commonly the most easily recoverable microfossils and have been widely used in petroleum exploration notably in China Russia Brazil and the western United States North American Index Fossils, Invertebrates: Conularida, Pteropoda, Cephalopoda, Annelida, Trilobita, Phyllopoda, Ostracoda, Cirripedia, Malacostraca, Merostomata, Arachnida, Myriopoda, Insecta, Cystoidea, Blastoidea, Crinoidea, Ophiuroidea, Asteroidea, Echinoidea and appendices Amadeus William Grabau, Hervey Woodburn Shimer, 1910

Permian-Triassic Evolution of Tethys and Western Circum-Pacific Yin Yin Hongfu, J.M. Dickens, G.R. Shi, Tong Tong Jinnan, 2000-05-10 Permian and Triassic are the interval known for the integration and separation of Pangea the closure of the Palaeotethys and the opening of Mesotethys They were associated with a series of worldwide events including the Late Palaeozoic glaciation and succeeding extensive evaporitic and reef formations the end Palaeozoic regression strong orogenies and widespread volcanism and magmatism and finally the Permo Triassic biotic macro extinction These events resulted in the formation of enormous reserves of coal petroleum evaporites phosphorites and metal resources The Permian and Triassic thus constitutes a time interval particularly important both for understanding the Earth's history and for exploration of mineral resources The book aims to reconstruct the Permian Triassic history of Pangea Palaeo Tethys and Palaeo Pacific through stratigraphic palaeogeographic and other interdisciplinary approaches It consists of two parts Part 1 deals with regional stratigraphy of Tethyan and western Circum Pacific countries which is the basis for interregional correlation and palaeogeography Part 2 deals with the biotic evolution at the Permian Triassic transition focusing on the major invertebrate groups foraminifers radiolarians brachiopods ammonoids and conodonts

Evolutionary Biology of Ostracoda N. Ikeya, K. Ishizaki, T. Hanai, 2011-10-10 There are many competitive works on the market concerning evolutionary biology but this volume is quite distinctive in its idiographic aspect focusing on Ostracoda viewed from a wide range of disciplines ages and environments The book deals with various lines of idiographic biology and palaeontology of Ostracoda and nomothetic trials focusing

strongly on evolutionary biology Particular themes are morphology biology evolution speciation ecology palaeoecology deep sea fauna biogeography palaeobiogeography biostratigraphy and exploration all concerning Ostracoda The last decade has witnessed a spectacular renewal of interest in the study of Ostracoda particularly in the evolutionary biology of Ostracoda including speciation Ostracoda are unique ranging in age from the Cambrian period to modern times with carapaces ready to be preserved as fossils providing various lines of invaluable evidence regarding evolutionary processes More than 120 participants from 20 countries assembled at the Ninth International Symposium on Ostracoda and this book is a collection of all the papers presented at the Symposium plus selected papers submitted by non attending members It presents an outstanding record of much pioneering research and will be of interest to specialists in Ostracoda as well as all earth and life scientists concerned with evolution Its value is further enhanced by easy to use indexes of authors localities and taxa

Cretaceous Environments of Asia H. Okada,N.-J. Mateer,2000-03-30 This book presents a synthesis of the principal environmental characteristics of the Cretaceous in East and South Asia The research was accomplished under IGCP project 350 which deals with the biological climatological and physical environments of this region during the Cretaceous This synthesis discusses aspects of stratigraphy sedimentology paleontology geochemistry tectonics petrology mineralogy and geophysics The research results are summarised by country and include Far East Russia Mongolia eastern China Korea Japan Philippines Vietnam Laos Cambodia Thailand and India Although these countries do not encompass the entire region this coverage provides an excellent perspective of the evolution of the region during the Cretaceous The records incorporated in this book present a wealth of marine and nonmarine data on climate biotic diversity circulation and chemistry of the ocean as well as fundamental plate tectonism The latter appears to have caused much of the environmental change in this broad region including both an enhanced greenhouse effect and high sea levels

Horne, Koen Martens, 2013-11-11 Ostracoda Crustacea

are potentially excellent model organisms for evolutionary studies because they combine an extensive fossil record with a wide recent distribution and therefore allow studies on both patterns and processes leading to extant diversity The main scientific domains contributing theories concepts and data to evolutionary biology are morphology including ontogeny palaeontology genetics and ecology and to all of these aspects ostracods can contribute This is clearly illustrated by the fifteen papers presented under Theme 3 of the 13th International Symposium on Ostracoda Chatham UK in 1997 which are grouped in the present proceedings one of three volumes resulting from this meeting The contributions deal with the evolution of both extant and fossil forms including most of the Phanerozoic ecology of both marine and freshwater taxa and developmental morphology of both soft parts and valves Although the canvas is wide each paper clearly shows how studies on Ostracoda can be relevant to general theory on evolutionary biology and ecology

This volume is dedicated to the interdisciplinary study of dynamic biological changes through the Phanerozoic which are associated with mass extinction events and similar biotic crises and their causal mechanisms In particular it documents in detail the complex nature of terrestrial and extraterrestrial feedback loops that are associated with many mass extinction intervals Authors have been asked to represent most of the known mass extinction events through time and to comment on the complex earthbound or extraterrestrial causes or both for global biotic crises The reader is offered new perspectives of extinction boundaries a more innovative and diverse approach to causal mechanisms and mass extinction theory blended views of paleobiologists oceanographers geochemists volcanologists and sedimentologists by an international cast of authors No other book on extinction presents such a broad spectrum of data and theories on the subject of mass extinction
