Lucas, Jiri Zidek, 1993      **Islands in the Cosmos** Dale A. Russell, 2009-07-14 How is it that we came to be here The search for answers to that question has preoccupied humans for millennia Scientists have sought clues in the genes of living things in the physical environments of Earth from mountaintops to the depths of the ocean in the chemistry of this world and those

nearby in the tiniest particles of matter and in the deepest reaches of space In *Islands of the Cosmos* Dale A Russell traces a path from the dawn of the universe to speculations about our future on this planet He centers his story on the physical and biological processes in evolution which interact to favor more successful and eliminate less successful forms of life Marvelously these processes reveal latent possibilities in life s basic structure and propel a major evolutionary theme the increasing proficiency of biological function It remains to be seen whether the human form can survive the dynamic processes that brought it into existence Yet the emergence of the ability to acquire knowledge from experience to optimize behavior to conceptualize to distinguish good from bad behavior all hint at an evolutionary outcome that science is only beginning to understand

**Morphometrics** Ashraf M.T. Elewa,2013-03-09 Morphometrics is one of the most dynamic and popular fields on the contemporary biological scene Focusing as it does on the quantitative characterization and analysis of morphological data students increasingly see morphometrics as a necessary complement to molecular studies in their quests to understand the origin and maintenance of biodiversity Moreover morphometrics has recently been shown to have direct utility in phylogenetic contexts by both finding new and sharpening the definition of old character states At this juncture in the field s development a more up to date and thorough treatment of the use of morphometric procedures in a wide variety of contexts is needed The book in hand Morphometrics provides such answers to real world questions for real world systematists
