Ecology Of Language Acquisition:

Ecology of Language Acquisition J.H. Leather, Jet van Dam, 2013-03-09 While most research on language acquisition continues to consider the individual primarily in closed system terms Ecology of Language Acquisition emphasizes the emergence of linguistic development through children's and learners' interactions with their environment spatial social cultural educational and so on bringing to light commonalities between primary language development child and adult second language learning and language acquisition by robots Such a situated context responsive perspective on acquisition is able to interrelate insights from a variety of paradigms and disciplines while avoiding unjustifiable appeals to normativity The theoretical and empirical studies presented here challenge a number of dominant ideas in language acquisition theory and mark an important new research orientation This work should be of interest to language acquisition researchers and professionals in a wide range of specialisms

Language Acquisition and Language Socialization Claire Kramsch, 2003-02-01 This is an outstanding collection of papers by top scholars in a range of disciplines who shed stimulating complementary insights into the social cognitive and semiotic frameworks that shape both the acquisition of language and the constitution of social actors through that process The intentionally loose ecological framing of the volume provides an arena within which a range of perspectives all united by their opposition to a mechanistic view of language acquisition can enter into dialogue with each other This is a most stimulating collection with a range of insightful investigations of settings as diverse as an autistic child learning to interact with others on the playing field professional gate keeping encounters and foreign language classrooms Professor Charles Goodwin University of California at Los Angeles The book brings together well known scholars in two relatively distinct fields language acquisition and language socialization and from a variety of orientations within applied linguistics to describe language development from a relational perspective The papers in this volume are a response to three main questions 1 What conceptual models best capture the ecological nature of language learning 2 What research approaches are best likely to illuminate the relationship between language and social structure 3 How is educational success defined for language acquisition and language socialization

The Ecology and Semiotics of Language Learning Leo van Lier, 2006-04-18 In this book I try to give a coherent and consistent overview of what an ecological approach to language learning might look like This is not a fully fledged grand theory that aims to provide an explanation of everything but an attempt to provide a rationale for taking an ecological world view and applying it to language education which I regard as one of the most important of all human activities Goethe once said that everything has been thought of before but that the difficulty is to think of it again The same certainly is true of the present effort If it has any innovative ideas to offer these lie in a novel combination of thoughts and ideas that have been around for a long long time The reader will encounter influences that range from Spinoza to Bakhtin and from Vygotsky to Halliday The scope of the work is intentionally broad covering all major themes that are part of the language learning process and the language

teaching profession These themes include language perception and action self learning critical pedagogy and research At the same time I have attempted to look at both the macro and the micro sides of the ecological coin and address issues from both a theoretical and a practical perspective This then aims to be a book that can be read by practitioners and theoreticians alike and the main idea is that it should be readable and challenging at the same time

Language as an Ecological Phenomenon Sune Vork Steffensen, Stephen Cowley, Martin Döring, 2024-05-30 Moving beyond a more traditional view of language as a discrete sociocultural and cognitive entity that distorts our understanding of surrounding ecologies this book argues that the starting point for ecolinguistics is an appreciation of language as not just about nature but of nature Exploring this conceptual change in the field the book presents a process view in which language is substituted by languaging emphasising the bioecologies that we cohabit with numerous other species It puts forward this perspective by looking at the theoretical considerations behind the understanding of languaging as bioecological and through examining languaging in various contexts and places Drawing on examples from across the world it addresses topics such as climate catastrophes corporate narratives questions of ecological leadership the bioecological implications of the COVID pandemic and relational landscapes It also makes use of data from across multiple bioecological settings including the dairy and agricultural industries

Encyclopedia of the Sciences of Learning Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers

Learning Chinese in a Multilingual Space Peiru Tong, Linda Tsung, 2022-05-25 This book examines the benefits of an Australian in country study ICS in China programme and explores ways to maximise the short term ICS experience in a multilingual space The book employs an ecological perspective which has seldom been used to examine the study abroad context It emphasises the importance of the space itself as an arena of interaction belonging and power where conduct and modes of communication are often regulated by political authorities and societal expectations Specifically the book focuses on the following the extent to which the ICS facilitated interaction in different settings the way in which interaction during ICS contributed to language learning the degree in which the interaction during ICS contributed to culture learning and the role of identity in the learning process in the ICS The main argument of the book is that while the ICS promoted multilingual learning space for in class and out of class interactions which further facilitated language and culture learning to a great extent Australian students identities and self concepts also played a core mediating role throughout individual learning trajectories

Mediating Discourse Online Sally Sieloff Magnan, 2008 Information and communication technology is transforming our notion of literacy In the study of second language learning there is an acute

need to understand how learners collaborate in mediating discourse online This edited volume offers essays and research studies that lead us to question the borders between speech and writing to redefine narrative to speculate on the consequences of many to many communication and to ponder the ethics of researching online interaction Using diverse technologies bulletin boards course management systems chats instant messaging online gaming and situated in different cultural environments the studies explore intercultural notions of identity voice and collaboration Although the studies come from varying theoretical perspectives they point as a whole to insights to be gained from an ecological approach to studying how people make discourse online The volume will especially benefit researchers in the digital arena and instructors who must consider how online interaction affects language learning and use

Willingness to Communicate in the Chinese EFL University Classroom Jian-E Peng, 2014-02-24 This book presents mixed methods research into Chinese students willingness to communicate WTC in an EFL classroom context The interrelationships between WTC and motivation communication confidence learner beliefs and classroom environment are examined using structural equation modelling on data collected in a large scale survey These results are then complemented and expanded upon in a follow up multiple case study that identifies six themes which account for fluctuations of WTC over time and across situations The qualitative and quantitative data provide the grounds for the proposition of an ecological model of WTC in the Chinese EFL university classroom which reveals that WTC is socioculturally constructed as a function of the interaction of individual and environmental factors inside and beyond the classroom walls

Distributed Language, Affective Dynamics, and the Human Ecology Volume I Paul J. Thibault, 2020-11-23 Language plays a central role in human life However the term language as defined in the language sciences of the 20th century and the traditions these have drawn on have arguably limited our thinking about what language is and does The two inter linked volumes of Thibault s study articulate crucially important aspects of an emerging new perspective shift on language the Distributed Language view that is now receiving more and more attention internationally Rejecting the classical view that the fundamental architecture of language can be localized as a number of inter related levels of formal linguistic organization that function as the coded inputs and outputs to each other the distributed language view argues that languaging behaviour is a bio cultural organisation of process that is embodied multimodal and integrated across multiple space time scales Thibault argues that we need to think of human languaging as the distinctively human mode of our becoming and being selves in the extended human ecology and the kinds of experiencing that this makes possible Paradoxically this also means thinking about language in non linguistic ways that break the grip of the conventional meta languages for thinking about human languaging Thibault s book grounds languaging in process theory languaging and the forms of experience it actualizes is always an event not a thing that we use In taking a distinctively interdisciplinary approach the book relates dialogical theories of human sense making to the distributed view of human cognition to recent thinking about distributed language to ecological psychology and to languaging as inter individual

affective dynamics grounded in the subjective lives of selves In taking this approach the book considers the coordination of selves in social encounters the emergent forms of self reflexivity that characterise these encounters and the implications for how we think of and live our human sociality not as something that is mediated by over arching codes and systems but as emerging from the endogenous subjectivities of selves when they seek to coordinate with other selves and with the situations artefacts social institutions and technologies that populate the extended human ecology The two volumes aim to bring our understanding of human languaging closer to human embodiment experience and feeling while also showing how languaging enables humans to transcend local circumstances and thus to dialogue with cultural tradition Volume 1 focuses on the shorter timescales of bodily dynamics in languaging activity Volume II integrates the shorter timescales of body dynamics to the longer cultural historical timescales of the linguistic and cultural norms and patterns to which bodily dynamics are integrated

Bringing Forth a World Joff P.N. Bradley, David Kennedy, 2019-12-30 Offering a critical yet constructive response to the perceived crises in tertiary foreign language education in the Japanese university the contributors to *Bringing Forth a World* provide theoretical and practical solutions which together act as a prolegomena to bringing forth a world Theirs is an ecology of contribution in liberal arts education which takes responsibility for the care for youth and contests intellectual passivity and indifference in foreign language instruction The editors proffer a transformative engaged and multidisciplinary liberal arts pedagogy one at odds with forms of lowest common denominator one size fits all and standardized provision In response to the prevalent business dominated model they demonstrate an applied format of multiliteracy theory one with semiotic multimodal feminist dimensions which is regionally specific and better accounts for divergent forms of human expression and perception The writers not only take account of the intellectual and mental issues in the student demographic but also in the teaching profession which suffers from widespread anxiety job insecurity and a lack of autonomy experimentation and innovation Philosophically the contributors to this book demand a form of meaning making which is fundamentally social and creative and which celebrates processes of becoming other in between the student and teacher that seldom if ever follow a predictable trajectory It is hoped that readers will embrace the spirit of the book pick

up its philosophical gauntlet to think otherwise than prevalent standardized models of teaching and learning and therefore will use its core tenets to experiment with different ways of educating the youth of today
