Intangibles in the Big Picture Gary Zatzman, Rafiqul Islam, 2009 The so called TINA syndrome provides the fundament the actual rock on which the political economic military and other elites and establishments of the Anglo American world and European bloc have built their church Inscribed over its entrance stands the motto there is no god but monopoly and maximum is his profit On this basis continuous attacks on the very concept of intangibles are launched most prominently against time consciousness Especially singled out is time consciousness based on appreciating and or prioritising the long term over the short term as well as placing the interests of the social collective over the interests of any individual member of the collective In this book it is argued that Humanity has been on the wrong track since Sir Isaac Newton published his Principia Mathematica at the end of the 17th century and that the scientific research enterprise developed since then has taken the world on a merry chase to nowhere Without exception the assaults on time consciousness and on cognition of what happens in and through the passage of time take the form of a denial of the principle of Nature as the Mother of all wealth The denial of this principle has always encountered resistance Some resist by breaking the attacks down and responding to selected cases For example the contributors to the book Underdevelopment and Social Movements in Atlantic Canada Toronto 1979 following precisely this tact act according to the principle that the movement is everything This places the struggle of the people for livelihood where it belongs viz at the centre of economic theory and practice However these writers version of this approach is silent about long term or final aims Their work actually prioritises t right now over longer term views of the role of time in social historical processes People s deepest desires to see Justice prevail and Injustice sent packing are generally aroused positively by their apparent stand on the side of labour against capital a great deal of hope might well be vested in these stands Has this hope however been misplaced Analysis of these authors collective work from 1979 as the Soviet Union began its final slide to oblivion by invading Afghanistan and its source in theories of regional underdevelopment formulated at the Cold War s height in the late 1950s suggests this may be the case Especially disturbing is the outlook underlying that theory and specifically its extreme pragmatism and welter of contradictions and inconsistencies These disclose a position entirely at odds with the proclaimed mission to establish the truth of matters under investigation In order to maintain a position in what they see as the mainstream today some of these

writers have taken matters further adapting to fit the cut of current discourse in the early 2000s some of the concerns raised in the earlier work *En route* however they make a major concession to the disinformation of the Canadian fisheries department that there are too many fishermen chasing too few fish Disguising the concession as an appeal for ecological sanity in the face of a pending environmental crisis of raw material food supplies during a period of still excessive capitalization in the coastal fishing industry those putting forward this argument decline to challenge the claims by the government and the largest fish processors that the problem at bottom is a shortage of raw material a defect in Nature As however the problem is actually one of how Humanity has arranged its affairs when it comes to extremely fundamental matters like food gathering this concession no less than any of the other more direct attacks on time consciousness and on cognition as a source of reliable information forms part of a far more general and sweeping assault on the very concept of human agency This assault challenges the fundamental notion that no human social problem is without some human social solution The fact of the matter is that the essence of human social agency lies on the path of pursuing knowledge Whosoever would increase knowledge is bound to disturb the status quo but even so a person must increase his knowledge of the truth

Time in Contemporary Intellectual Thought P.J.N. Baert,1999-12-09 In this book fifteen authors from a wide spectrum of disciplines ranging from the natural sciences to the arts offer assessments of the way time enters their work the definition and uses of time that have proved most productive or problematic and the lessons their subjects can offer for our understanding of time beyond the classroom and laboratory walls The authors have tried without sacrificing analytical rigour to make their contribution accessible to a cross disciplinary readership Each chapter reviews time s past and present application in its respective field considers the practical and logical problems that remain and assesses the methods researchers are using to escape or resolve them Particular attention is paid to ways in which the technical treatment of time for problem solving and model building around specific phenomena call on or clash with our intuitive perceptions of what time is and does The spans of time considered range from the fractions of seconds it takes unstable particles to disintegrate to the millions of years required for one species to give way to another Like all central conceptual words time is understood on several levels By inviting input from a broad range of disciplines the book aims to provide a fuller understanding of those levels and of the common ground that lurks at their base Much agreement emerges not only on the nature of the problems time presents to modern intellectual thought but also on the clues that recent discoveries may offer towards possible solutions
