The Economics of Offsets: Defence Procurement and Countertrade edited by Stephen Martin

Offsets, or work-sharing arrangements, are frequently requested by governments when buying foreign defence equipment. Under an offset the vendor agrees to place work to a set value with firms in the buying country. Although popular, controversy surrounds their impact. Some claim that offsets create jobs and enhance the defence industrial base. Others argue that offset work would have been won without the offset or that it is low technology work which ceases once the vendor has fulfilled its offset obligation. Somewhat contradictorily, defence exporters with large offset obligations are often criticised for transferring work (jobs) and technology to potential foreign competitors.

Despite their growth (which is outlined and analyzed in the book) the claims and counter-claims that surround offsets have not been subjected to critical scrutiny by economists. This book fills that gap. It brings together a team of internationally renowned specialists to document and evaluate the economic impact of several countries' offset policies. The authors also consider what further information is required for more informed public policies towards offsets.

This book is designed for those studying defence economics, industrial economic policy, defence policy, business studies and international trade. It will also be of interest to practitioners and policy-makers in both government and industry.

Modeling the Economics of Greenhouse Gas Mitigation National Research Council, Division on Engineering and Physical Sciences, 2011-02-24 Models are fundamental for estimating the possible costs and effectiveness of different policies for reducing greenhouse gas GHG emissions There is a wide array of models to perform such analysis differing in the level of technological detail treatment of technological progress spatial and sector details and representation of the interaction of the energy sector to the overall economy and environment These differences impact model results including cost estimates More fundamentally these models differ as to how they represent fundamental processes that have a large impact on policy analysis such as how different models represent technological learning and cost reductions that come through increasing production volumes or how different models represent baseline conditions Reliable estimates of the costs and potential impacts on the United States economy of various emissions reduction and other mitigation strategies are critical to the development of the federal climate change research and development portfolio At the request of the U S Department of Energy DOE the National Academies organized a workshop summarized in this volume to consider some of these types of modeling issues

The Economics of Defense Industry Thomas-Durell Young, 2023-10-17 This book on the economics of defence industry assesses a series of historical and contemporary case studies that consistently demonstrate the need for governments to recognise and thereafter factor the financial needs of a narrow industrial sector that is capital intensive technologically advanced and that requires a highly skilled labour force Since the end of the cold war Western governments have systematically reduced financial support to their domestic defence industry and have seemingly ignored planning and funding industrial mobilisation In all cases government policy has been to encourage industries to consolidate capacity to become financially viable in a sector that has seen diminished demand The 2022 Russian invasion of Ukraine has caused Western governments to reassess their previous assumptions Efforts to increase industrial capacity have been met with the iron laws of economics whereby businesses need to show return on

investments The chapters in this volume posit that efforts to rationalise industrial capacity and innovation to meet short term financial efficiencies inevitably results in limited expensive and long delays in increased production in times of international crisis This book serves as an essential guide for academics researchers and students interested in defence economics industrial economics international relations and industrial policy The chapters in this book were originally published in various issues of Defense Security Analysis

Technology Offsets in International Defence Procurement Kogila Balakrishnan,2018-08-14 Technology offsets a nonconventional international trade financing tool is used by governments buyers to obtain industrial and technological benefits from

companies sellers as part of international procurement Offsets deals involve billions of dollars and this practice exists in around 80 countries around the world Though offsets is a popular practice in defence it is increasingly gaining popularity in civil sectors Offsets is often tainted by controversy and receives bad press What then makes offsets popular Governments claim that offsets delivers technology and knowledge transfer skills in high technology sectors and employment and offsets expands export opportunities through participation in OEM supply chains For companies offsets is mainly employed as a tool to obtain a competitive edge and win sales in international business In the past there have been mixed results of case studies on the impact of offsets successes and failures Considering the mismanagement of globalisation unfair trade agreements and current political and economic discontent there is a stronger need for governments and companies to use vehicles such as offsets to create a relationship of trust and commitment for sustainable development This book fills the gap in offsets and focuses on how to manage offsets more effectively by addressing issues of strategy policy and implementation technology management governance and risk Technology Offsets in International Defence Procurement is designed for those studying international procurement international trade international business technology management defence policy and industrial policy This book will also be of interest to practitioners and policy makers in both government and industry
