Promoting Entrepreneurship to Reduce Graduate Unemployment Katono, Isaac Wasswa, 2022-04-01 Based on recognition evaluation and exploitation of opportunities entrepreneurship is a process that stimulates economic growth provides us with new products and services and serves as a solution to low unemployment rates Hence many governments encourage their citizens to embrace entrepreneurship as a strategy to mitigate unemployment particularly youth and graduate unemployment While studies show that entrepreneurship education has yielded positive results in Western countries in other parts of the world it seems that most students still prefer to seek paid employment in their career of choice Promoting Entrepreneurship to Reduce Graduate Unemployment seeks to expand understanding of the barriers that face graduates in becoming entrepreneurs in various countries examining the role of educational institutions in promoting graduate entrepreneurship and evaluating governments as well as other schemes that promote graduate entrepreneurship Although it will not be a panacea for all the obstacles that impede graduate entrepreneurship it is hoped that this book will illuminate the entrepreneurship career path serve as a platform for further diagnosis for reducing graduate unemployment and highlight areas in need of further research Covering topics such as entrepreneurial self efficacy career choice and educated unemployment it serves as a dynamic resource for educators educational administration and faculty government institutions graduate students student organizations professionals researchers and academicians The Economic Journal, 1919 Contains papers that appeal to a broad and global readership in all fields of economics **Integrating Knowledge**

Through Interdisciplinary Research Dominic Holland, 2013-08-22 In this important new text Holland seeks to explain by means of social scientific and philosophical inquiry the difficulties that researchers often experience when attempting to integrate knowledge from different academic disciplines either individually or as part of a team of subject specialists It is argued that the difficulty of integrating knowledge from different academic disciplines is the result of firstly an inadequate justification of the nature of scientific integration and differentiation and secondly the dominance of disciplinary specialization in scientific inquiry By focusing on both the theoretical justification for and the practical feasibility of integrating knowledge through interdisciplinary research this book asks what properties of reality make the integration of knowledge from different academic disciplines possible and to what extent it is feasible to integrate knowledge through interdisciplinary research within a traditional disciplinary context Accordingly the text is both philosophical and social scientific in content philosophical in the sense that it presents a theory of causal determination which will help researchers to understand how reality is both differentiated and interconnected social scientific in the sense that it presents the results of three case studies of collaborative interdisciplinary research projects The book is heavily informed by the philosophy of critical realism The philosophical argument about the possibility of integration and specialization in science draws explicitly

on some of the key concepts of critical realism particularly those comprising the theory of integrative pluralism while critical realist assumptions underpin the social scientific argument about the causal influence of the social system of knowledge production By exploring researchers conceptions of knowledge and of reality on the one hand and their decisions about what sort of knowledge to produce on the other Holland shows how the difficulty of scientific integration is both a problem of knowledge and a problem of knowledge production This book is essential reading for students and academics interested in the emerging topic of knowledge integration and interdisciplinarity Journal of the Council for Scientific and Industrial Research Council for Scientific and Industrial Research (Australia),1927 **Report of the National Academy of Sciences for the Year ...** National Academy of Sciences (U.S.),1927
