Connell, Paul Lam, Bruce Richardson, Rudolf Wu, 2009-07-17 Environmental pollution is one of the most serious threats to the future health of our planet A wide and ever increasing range of chemicals from industry agriculture medicine and a host of other sources continue to contribute to the earth s chemical load Governments have encountered great difficulties responding to the crucial and immediate need for effective management As a result the new science of ecotoxicology has developed which provides a broad conceptual framework for evaluating the effects of chemicals in natural ecosystems This book is aimed principally at undergraduate students who have completed basic courses in both chemistry and biology It takes a broad view of ecotoxicology starting with the nature properties and behaviour of environmental toxicants and extends to

dose response relationships and effects on organisms populations communities and ecosystems Importantly it also addresses environmental management areas such as biomarkers biomonitoring ecological risk assessment and the ecotoxicology and management of chemicals The book provides an invaluable overview of the subject for students taking courses in ecotoxicology and environmental pollution as well as wider degree programmes in biology ecology wildlife management environmental science environmental impact assessment toxicology pollution chemical engineering civil engineering sanitation engineering and related subjects

Stressors in the Marine Environment Martin Solan, Nia M. Whiteley, 2016 A multitude of direct and indirect human influences have significantly altered the environmental conditions composition and diversity of marine communities However understanding and predicting the combined impacts of single and multiple stressors is particularly challenging because observed ecological feedbacks are underpinned by a number of physiological and behavioural responses that reflect stressor type severity and timing Furthermore integration between the traditional domains of physiology and ecology tends to be fragmented and focused towards the effects of a specific stressor or set of circumstances This novel volume summarises the latest research in the physiological and ecological responses of marine species to a comprehensive range of marine stressors including chemical and noise pollution ocean acidification hypoxia UV radiation thermal and salinity stress before providing a perspective on future outcomes for some of the most pressing environmental issues facing society today

Stressors in the Marine Environment synthesises the combined expertise of a range of international researchers providing a truly interdisciplinary and accessible summary of the field It is essential reading for graduate students as well as professional researchers in environmental physiology ecology marine biology conservation biology and marine resource management It will also be of particular relevance and use to the

regulatory agencies and authorities tasked with managing the marine environment including social scientists and environmental economists

A Handbook of Environmental Toxicology J.P.F. D'Mello, 2019-12-04 Written by an international team of authors from a range of educational medical and research establishments this book is an essential reference for advanced students and researchers in the areas of environmental sciences ecology agriculture environmental health and medicine in addition to industry and government personnel responsible for environmental regulations and directives A Handbook of Environmental Toxicology focuses on two key aspects human disorders and ecotoxicology as affected by major toxins originating from biological sources and pollutants as well as radiation generated spontaneously or as a result of anthropogenic activity A diverse array of these potentially harmful agents regularly appear in the atmosphere soil water and food compromising both human health and biodiversity in natural and managed ecosystems

Contaminants of Emerging Concern in the Marine Environment Victor M. Leon, Juan Bellas, 2023-03-13

Contaminants of emerging concern in the marine environment current challenges in marine pollution reviews the available data in relation to contaminants of emerging concern CECs in the marine environment main sources transport pathways distribution in seawater and sediments bioaccumulation and biological effects Each chapter recaps the most relevant information about the main groups of CECs describing the particularities and specificities of each group and focusing on the most relevant individual contaminants CECs are not regulated substances and therefore not considered in national and international monitoring programs even though they may have a potential impact on the environment due to their continuous input relative persistence and or toxicity CECs are relevant not only in continental and coastal areas close to their main sources but also in the open sea because some of them are likely to be transported long distances through air deposition or absorbed into particulate material The persistence of many degradable substances in the marine environment increases when they are absorbed into particulate material sediments and or when they are subjected to anaerobic conditions that slow down the degradation kinetic of many contaminants Bioaccumulation of several CECs has been confirmed in different coastal organisms however in general the information available species and trophic levels considered is very limited because most studies are mainly focused on

specific coastal areas This book offers useful information about not regulated contaminants that are not considered in international monitoring programs but have potential impacts in coastal and open sea areas Therefore reading the book will allow them to improve their view about the real impact of current use contaminants in the marine environment Presents a comprehensive view of the most relevant groups of CECs Includes an overview of each group of CECs including uses properties analysis distribution bioaccumulation and effects Provides information on all environmental compartments and marine areas coast continental shelf and open sea

Ecotoxicology Erik Jorgensen,2010-04-16 Ecotoxicology offers an overview of current ecotoxicological problems It includes basic ecotoxicological concepts as well as information about chemicals and toxic substances that may cause harmful effects on the ecosystem and its living components The book with a total of 48 chapters is divided into three parts The first part includes the basic concepts of ecotoxicology starting with an introductory chapter on ecotoxicology as a subdiscipline of ecology assessment on ecotoxicological effects and risk and properties and effects of toxic chemicals These topics are further discussed throughout the book along with nomenclature focal topics and the history of ecotoxicology The two remaining parts tackle harmful properties and harmful chemicals The second part also covers bioaccumulation bioavailability biodegradability biodegradation and biomagnification It also provides models for ecotoxicological populations ecosystems and landscapes and on food web bioaccumulation Chemicals including benzene copper lead nitrogen phenols pheromones phthalates plutonium and uranium are covered in separate chapters in the final part This book will be of great value to ecologists ecotoxicologists and environmental managers Provides an overview of the theory and application of global ecology International focus and range of ecosystems makes Ecotoxicology an indispensable resource to scientists Based on the bestselling Encyclopedia of Ecology Full color figures and tables support the text and aid in understanding

Persistent Pollutants in Marine Ecosystems Colin H. Walker,D.R. Livingstone,2013-10-22 This new volume from the SETAC Society of Environmental Toxicology and Chemistry Special Publications Series examines the phenomenon of persistent pollutants in the seas and oceans Unlike the highly visible and obvious effects caused by oil certain chemicals have unseen but long term and far reaching effects on the marine ecosystem They often have long half lives are carried great distances and pass easily through the food chain from prey to predator The behaviour and effects of these persistent pollutants on each type of marine animal invertebrates vertebrates fish mammals and fish eating birds are described A final overview draws the observations and conclusions together presenting a work that provides a foundation for understanding the behaviour of persistent pollutants in the marine environment
