Expressing Music:

Musical Meaning and Expression Stephen Davies, 1994 We talk not only of enjoying music but of understanding it Music is often taken to have expressive import and in that sense to have meaning But what does music mean and how does it mean Stephen Davies addresses these questions in this sophisticated and knowledgeable overview of current theories in the philosophy of music Reviewing and criticizing the aesthetic positions of recent years he offers a spirited explanation of his own position Davies considers and rejects in turn the positions that music describes like language or depicts like pictures or symbolizes in a distinctive fashion emotions Similarly he resists the idea that music's expressiveness is to be explained solely as the composer's self expression or in terms of its power to evoke a response from the audience Music's ability to describe emotions he believes is located within the music itself it presents the aural appearance of what he calls emotion characteristics The expressive power of music awakens emotions in the listener and music is valued for this power although the responses are sometimes ones of sadness Davies shows that appreciation and understanding may require more than recognition of and reaction to music's expressive character but need not depend on formal musicological training

in musical journals tend to limit the importance of Hearing and Writing Music to ear training I believe that Mr Gorow s book is valuable for much more than ear training I have studied it and as a result of that study I believe that my auditory memory and imagination and my abilities in score reading have improved enormously Further I have been able to use the skills in this book to transcribe melodies harmonies and counterpoint almost effortlessly both those that I have heard and those which existed only in my imagination This book has opened many doors for me I believe that it can do so for many others

does often coupled with disbelief that he or she really makes a difference to the performance we hear The Silent Musician deepens our understanding of what conductors do and why they matter Rather than providing an instruction manual or a history it explores the role of the conductor in noiselessly shaping the music that we hear World renowned conductor Mark Wigglesworth deftly and wittily explores the philosophical underpinnings of conducting from the conductor's relationship with musicians and the music to the public and personal responsibilities conductors face and examines the subtler components of their silent art which include precision charisma diplomacy and passion Ultimately Wigglesworth shows how conductors by simultaneously keeping time and allowing time to expand manage to shape ensemble music into an immersive transformative experience without ever making a sound Rich in musical insights and phrased with wit and elegance The Tablet

It begins by considering what constitutes creativity taking a cross cultural view of music while investigating creative processes far beyond just the classical music genre including electronic media popular music and improvised music. In addition it looks at creativity in both writing and performing. The field of musical education is a key focus examining why creativity is important within the educational environment and looking at how schools might sometimes stifle creativity in their music teaching rather than encourage it. The book is packed with case studies and real life examples taken from studies across the world providing a powerful corrective to myths and outmoded conceptions which privilege the creative practice of individual artists. *Musical Creativity in Practice* argues the need for conceptual expansion of musical creativities in line with vital contemporary real world practices. It explores how different types of musical creativities are recognised and communicated in the real world practices of a diversity of professional musicians. The book covers creative practice issues underlying composing improvising singer songwriting originals bands DJ cultures live coding and interactive sound designing and the implications of creativity research for music education and for the assessment of creativities in industry and education. *Musical Creativities in Practice* will be valuable for those in fields of music psychology and music education from advanced undergraduate level upwards.

Expression of emotion in music and vocal communication Anjali Bhatara, Petri Laukka, Daniel J. Levitin, 2014-08-18 Two of the most important social skills in humans are the ability to determine the moods of those around us and to use this to guide our behavior To accomplish this we make use of numerous cues Among the most important are vocal cues from both speech and non speech sounds Music is also a reliable method for communicating emotion It is often present in social situations and can serve to unify a group's mood for ceremonial purposes funerals weddings or general social interactions Scientists and philosophers have speculated on the origins of music and language and the possible common bases of emotional expression through music speech and other vocalizations They have found increasing evidence of commonalities among them However the domains in which researchers investigate these topics do not always overlap or share a common language so communication between disciplines has been limited The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music speech and non verbal vocalizations This includes natural sounds produced by human and non human primates as well as synthesized sounds

Music, Imagination, and Culture Nicholas Cook, 1990 It is a common experience that words are inadequate for music there seems always to be a disparity between how music is experienced and how it is described or rationalized This book is a study of musical imagination Musicians imagine music by means of functional models which determine certain aspects of the music while leaving others open This means that there is inevitably a gap between the image and the experience that it models and this gap can be a source of compositional creativity Different musical cultures embody different ways of imagining sound as music and thus every culture creates its own distinctive pattern of discrepancies between image and experience discrepancies which are reflected in theoretical thinking about music Drawing on psychological and philosophical materials as well as the analysis of specific musical examples Nicholas Cook makes a clear distinction between the province of music theory and that of aesthetic criticism In doing so he affirms the importance of the ordinary listener in musical culture and the validity of his or her experience of music
