Extinct and Endangered Plants of Australia J. H. Leigh, Robert Boden, John D. Briggs, 1984 Threatened Flora in Australia Kevin P. Slattery, Robert L. Wallis, 1993 Rare or Threatened Australian Plants JD Briggs, JH Leigh, 1996-01-01

The Rare or Threatened Australian Plants ROTAP list and associated coding system was developed and has been maintained by CSIRO since 1979 and lists taxa that are Presumed Extinct Endangered Vulnerable Rare or Poorly Known at the national level This edition provides the most up to date list for conservation purposes A significant number of endangered and Vulnerable taxa are included which have not yet been considered for inclusion on either the Australian and New Zealand Environment and Conservation Council list or the Commonwealth s Schedule 1 This is the first ROTAP publication to include subspecies and varieties and the list now includes 5031 taxa There have also been at least 3270 amendments to data for listed taxa A total of 2012 additional records of regional data for taxa already listed has been included A key factor in the development of public opinion and the design of effective management schemes lies in the production of accurate data to tell the story What is threatened Where is it found These are two of the most fundamental questions to answer before any strategic plans can be drawn up Obtaining such apparently simple statistics is a huge task Rare or Threatened Australian Plants is therefore an important reference for the national status of threatened species particularly for Rare and Poorly Known species

Flora of New South Wales Gwen Jean Harden, 1990 Final volume in a series describing every native and naturalised vascular plant species in NSW This volume covers monocotyledons including the Poaceae the Cyperaceae the Juncaceae and the Orchidaceae and contains a key to families of monocotyledons as well as keys to genera and species Each species is illustrated with black and white line drawings and 230 species are shown in colour photographs Useful reference for both amateur and professional botanists Includes references glossary a cumulative index of plant names and an index to families for volumes 1-4 The editor is a senior botanist at the National Herbarium of New South Wales Royal Botanic Gardens Sydney

Wallis, 1991 Comprehensive reference book on threatened Australian fauna and flora Covers more than 4000 species with 3000 references and lists publications scanned subject headings and scientific names Useful for secondary and tertiary students and also available on floppy disk

Graeme Lofts, 2025-08-25 Feral Future Tim Low, 2002-12 A decade ago Tim Low journeyed to the remote northernmost tip of Australia. Instead of the pristine rain forests he expected, he found jungles infested with Latin American carpet grass and feral cattle. That incident helped inspire *Feral Future*, a passionate account of the history and implications of invasive species in that island nation with consequences for ecological communities around the globe. Australia is far from alone in facing horrific ecological and economic damage from invading plants and animals, and in Low's capable hands Australia's experiences serve as a wake-up call for all of us. He covers how invasive species like cane toads and pond apple got to Australia, often through misguided but intentional introductions, and what we can do to stop them. He also covers the many pests that Australia has exported to the world, including the paperbark tree *Melaleuca* that infests hundreds of thousands of acres in south Florida **2002 Year Book, Australia** ,
