Wood, 1977. **The Raped Earth** Sophia Z. Kovachevich, 2021-01-04. This book looks at the relationship between man and the environment and our betrayal of our duty to the environment. It shows how we have degraded and hurt and harmed that which we were to protect and care for. This book shows comprehensively the close relationship between man's actions and the reaction of the environment to those actions. It also has some suggestions as to how we can at least try to undo the harm we have caused. It is about the rape of the earth, pollution, landfills, killing of the animals, fish, fowl, desecration of nature, etc. *In Defense of the World's Most Despised Species* Ernest Small, 2023-10-05. Some animals and plants injure or kill millions of people annually; others cause trillions of dollars in property damage and loss. Such harmful species are understandably hated. However, the vast majority of the planet's millions of species are disliked simply because of how they look and act. This bias is endangering numerous species that play important roles in maintaining both the natural ecosystems and the human economies of the world. *In Defense of the World's Most Despised Species* examines the psychological motivations that lead people to make judgments about the attractiveness of species, noting the overwhelming importance of visual cues. It describes in considerable detail the physical and behavioral traits of species that lead us to love or hate them. Full color illustrations throughout present beautiful charming animals and plants, species that seem loathsome. Behavior of people in relation to such divergent species and their characteristics and numerous explanatory diagrams of relevant biological and psychological phenomena. The aim of this book is to give readers insights into how we humans arrive at biased judgments and to promote the welfare of valuable, albeit sometimes unlovable animals and plants that consequently suffer from discrimination. Many of the ugliest, most disgusting and feared species, such as vultures, toads, hyenas, sharks, spiders, and even the vast majority of cockroaches, in reality are some of our most valuable friends. Features: Theme of the book: human preferences for and against species is novel, scarcely examined to date. Multidisciplinary analysis, especially psychology, biological conservation science and ecology, as well as philosophy, agriculture, urban planning, human health and law. Text is accessible, user friendly, concise and well organized, making numerous complex topics comprehensible, readable, not only by specialists but also by students and the educated layperson. Includes over 2,000 high quality, entertaining and informative color figures. **The World's Work**, 1918.
